

SiT1569

µPower, Ultra-Small 1 Hz – 462.5 kHz ±50 ppm Oscillator

Features

- µPower operating current: 3.3 µA (100 kHz)
- Factory-programmable frequency from 1 Hz to 462.5 kHz^[1]
- ±50 ppm max all-inclusive frequency stability
- World's smallest oscillator footprint: 1.2 mm²
- 1.5 mm x 0.8 mm CSP
- 0.6 mm max height
- No external bypass capacitors required
- Wide operating supply voltage range: 1.8 V to 3.3 V
- LVCMOS compatible output
- Pb-free, RoHS and REACH compliant

Applications

- Smart stylus
- Wearable biometric sensing
- Wireless chargers
- Portable medical

Note:

1. For higher frequency applications, consider the [SiT1576](#) or the [SiT8021](#).

Electrical Specifications

Table 1. DC Electrical Characteristics^[2]

Conditions: Min/Max limits are over temperature, $V_{DD} = 1.8 \text{ V} \pm 10\%$, unless otherwise stated. Typicals are at 25°C and $V_{DD} = 1.8 \text{ V}$.

Parameters	Symbol	Min.	Typ.	Max.	Unit	Condition
Frequency						
Output Frequency Range	F_{OUT}	1.0		462.5 k	Hz	
Frequency Stability						
Initial Tolerance	F_{tol}	-10		10	ppm	$T_A = 25^\circ\text{C}$. Includes 2x reflow.
Frequency Stability	F_{stab}	-50		50	ppm	All inclusive of over temperature, referenced to nominal frequency at 25°C, inclusive of V_{DD} , aging, and load
Jitter						
RMS Period Jitter	t_{jitter}		4	8.5	ns_{RMS}	10,000 cycles, per JEDEC standard 65B, tested at 100 kHz
Power Supply						
Power Supply Voltage	V_{DD}	1.62		3.63	V	
No Load Supply Current	I_{DD}		1.7	3	μA	$F_{OUT} = 1 \text{ Hz}$
			3.3	4.6		$F_{OUT} = 100 \text{ kHz}$
			8	10		$F_{OUT} = 462.5 \text{ kHz}$
Start-up Time	t_{start}		150	300	ms	$F_{OUT} > 200 \text{ Hz}$, to first output pulse.
			250 + 2.0 cycles	300 + 2.5 Cycles		10 Hz < $F_{OUT} \leq 200 \text{ Hz}$, to first output pulse.
				500 + 2.5 Cycles		1 Hz $\leq F_{OUT} \leq 10 \text{ Hz}$, to first output pulse.
Operating Temperature Range						
Commercial Temperature		-20		70	°C	
Industrial Temperature		-40		85	°C	
LVCMOS Output						
Rise-Fall Time	$t_{r/f}$	10	40	70	ns	20-80%, 15 pF load, $V_{DD} = 1.8 \text{ V} \pm 10\%$
Output Clock Duty Cycle	DC	45		55	%	
V_{OH} - Output Voltage High	V_{OH}	90%				$I_{OH} = -50 \mu\text{A}$, 15 pF load
V_{OL} - Output Voltage Low	V_{OL}			10%		$I_{OL} = 50 \mu\text{A}$, 15 pF load

Note:

2. For applications requiring lower jitter or improved frequency stability, consider the [SiT1579](#), or [contact SiTime](#) for other product options.

Table 2. Pin Configuration

Pin	Symbol	I/O	Functionality
1	NC	Internal Test Pin	No Connect. Leave floating. Pin 1 is for internal testing and is designed to be left floating.
2	CLK Out	Output	Oscillator clock output, LVCMOS compatible
3	V _{DD}	Power Supply	Connect to power supply between 1.8 V and 3.3 V \pm 10%. Under normal operating conditions, V _{DD} does not require external bypass/decoupling capacitor(s). The SiT1569 includes on-chip V _{DD} filtering.
4	GND	Power Supply Ground	Connect to GND

CSP Package (Top View)

Figure 1. Pin Assignments

Table 3. Absolute Maximum Ratings

Attempted operation outside the absolute maximum ratings may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.

Parameters	Test Conditions	Value	Unit
Continuous Power Supply Voltage Range (V _{DD})		-0.5 to 4.0	V
Continuous Maximum Operating Temperature Range		105	°C
Short Duration Maximum Operating Temperature Range	\leq 30 minutes	125	°C
Human Body Model (HBM) ESD Protection	JESD22-A114	2000	V
Charge-Device Model (CDM) ESD Protection	JESD22-C101	750	V
Machine Model (MM) ESD Protection	JESD22-A115	200	V
Latch-up Tolerance	JESD78 Compliant		
Mechanical Shock Resistance	Mil 883, Method 2002	20,000	g
Mechanical Vibration Resistance	Mil 883, Method 2007	70	g
1508 CSP Junction Temperature		150	°C
Storage Temperature		-65 to 150	°C

System Block Diagram

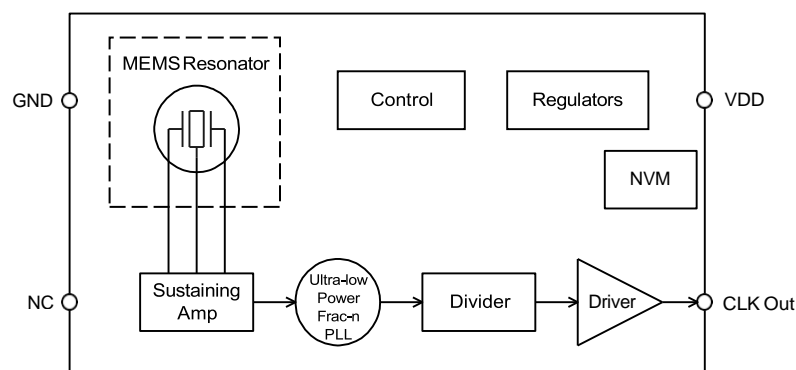

Figure 2. SiT1569 Block Diagram

Detailed Description

The SiT1569 is the first ULP, factory-programmable oscillator in an ultra-small 1.5mm x 0.8mm (1508) chip-scale package (CSP), and part of a new family of ULP, ultra-small oscillators from SiTime. This device can be programmed for any frequency between 1 Hz and 462.5 kHz. The silicon MEMS technology makes it possible to produce the world's smallest, programmable reference clock in a chip-scale package.

SiTime's MEMS oscillator consists of a MEMS resonator and a programmable analog circuit. SiT1569 MEMS resonator is built with SiTime's unique MEMS First[®] process. A key manufacturing step is EpiSeal[®] during which the MEMS resonator is annealed with temperatures over 1000°C.

EpiSeal creates an extremely strong, clean, vacuum chamber that encapsulates the MEMS resonator and ensures the best performance and reliability. During EpiSeal, a poly silicon cap is grown on top of the resonator cavity, which eliminates the need for additional cap wafers or other exotic packaging. As a result, SiTime's MEMS resonator die can be used like any other semiconductor die. One unique result of SiTime's MEMS First and EpiSeal manufacturing processes is the capability to integrate SiTime's MEMS die with a SOC, ASIC, microprocessor or analog die within a package to eliminate external timing components and provide a highly integrated, smaller, more cost-effective solution to the customer.

Frequency Stability

The SiT1569 oscillator is Factory trimmed to 32.768 kHz at room temperature. The result is a very accurate oscillator at room temperature and over temperature. Unlike quartz crystals that have a classic tuning fork parabola temperature curve with a 25°C turnover point with a 0.04 to 0.06 ppm/°C² temperature coefficient (TCF), the SiT1569 temperature coefficient is calibrated at room temperature and corrected over temperature with an active temperature correction circuit. The result is $<\pm$ 50 ppm frequency variation over the -40°C to +85°C temperature range.

When measuring the SiT1569 output frequency with a frequency counter, it is important to make sure the counter's gate time is $>$ 100 ms. Shorter gate times may lead to inaccurate measurements.

Typical Operating Curves

($T_A = 25^\circ\text{C}$, $V_{DD} = 1.8\text{ V}$, supply current plots are no load, unless otherwise stated)

Dimensions and Patterns

Manufacturing Guidelines

- 1) No Ultrasonic or Megasonic cleaning: Do not subject the SiT1569 to an ultrasonic or megasonic cleaning environment. Permanent damage or long term reliability issues may occur.
- 2) Applying board-level underfill and overmold is acceptable and will not impact the reliability of the device.
- 3) Reflow profile, per JESD22-A113D.
- 4) The SiT1569 CSP includes a protective, opaque polymer top-coat. If the SiT1569 will see intense light, especially in the 1.0-1.2 μ m IR spectrum, we recommend a protective “glob-top” epoxy or other cover to keep the light from negatively impacting the frequency stability.
- 5) For additional manufacturing guidelines and marking/tape-reel instructions, refer to [SiTime Manufacturing Notes](#).

Ordering Information

SiT1569AC-J3-33E-0000.000000Q

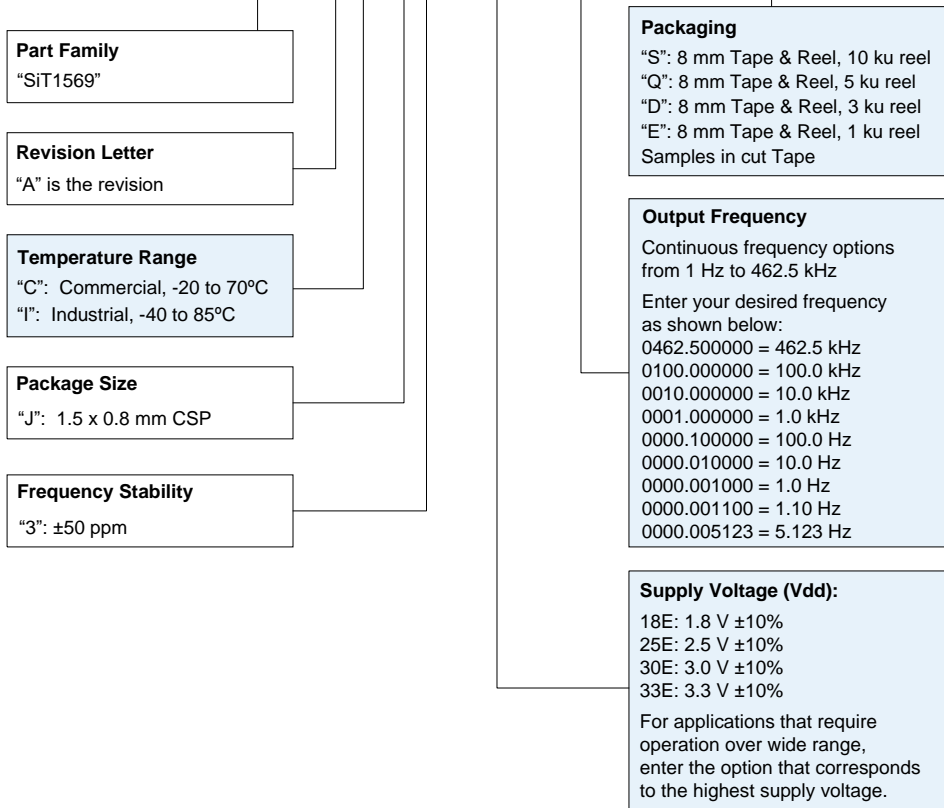

Table 4. Revision History

Version	Release Date	Change Summary
0.25	13-Jan-2016	Initial Preliminary
0.5	28-Apr-2016	Updated max operating frequency Updated part number ordering
0.7	8-Jul-2016	Updated min/max frequency stability, added RMS period jitter
0.9	28-Apr-2017	Update part numbering code Update min/max frequency stability Updated CSP package outline drawing (POD) Updated Supply Current max limits Updated logo and company address, other page layout changes
1.0	10-May-2017	Final Release
1.1	17-May-2018	Added additional typical operating curves Updated typical No Load Supply Current (Table 1) Corrected frequency range from '1 HZ – 460 KHz' to '1 HZ – 462.5 KHz'
1.2	25-Mar-2021	Added Option "D" for 3ku reels to the Ordering Information Updated hyperlinks, trademarks, date format and layout formatting
