

Rail-to-rail 1.1 V dual and quad nanopower comparators

Datasheet - production data

Related product

- See the TS881 datasheet for single operator with smaller package.

Applications

- Portable systems
- Signal conditioning
- Medical
- Automotive

Description

The TS882 is a dual and the TS884 device a quad comparator featuring ultra-low supply current (220 nA typical per operator with output high, $V_{CC} = 1.2$ V, no load) with rail-to-rail input and output capability. The performance of these comparators allows them to be used in a wide range of portable applications. The TS882 and TS884 devices minimize battery supply leakage and therefore enhance battery lifetime.

Operating from 1.1 to 5.5 V supply voltage, these comparators can be used over a wide temperature range (-40 to +125 °C) keeping the current consumption at an ultra-low level.

Features

- Ultra-low current consumption: 220 nA typ./op.
- Propagation delay: 2 μ s typ.
- Rail-to-rail inputs
- Push-pull outputs
- Supply operation from 1.1 V to 5.5 V
- Wide temperature range: -40 to +125 °C
- ESD tolerance: 8 kV HBM / 300 V MM
- Dual version available in MiniSO8 and DFN8 (2 x 2 mm) package
- Quad version available in SO14, TSSOP14 and QFN16 3 x 3 mm package

Table 1. Device summary

Order code	Temperature range	Package	Packaging	Marking
TS882IST	-40 to +125 °C	MiniSO8	Tape and reel	K514
TS882IYST ⁽¹⁾		MiniSO8 (Automotive grade)		K524

	Charged device model (CDM) ⁽⁶⁾	1300	
	Latch-up immunity	200	mA

1. All voltage values, except differential voltages, are referenced to V_{CC-} . V_{CC} is defined as the difference between V_{CC+} and V_{CC-} .
2. The magnitude of input and output voltages must never exceed the supply rail ±0.3 V.
3. Short-circuits can cause excessive heating. These values are typical.
4. According to JEDEC standard JESD22-A114F.
5. According to JEDEC standard JESD22-A115A.
6. According to ANSI/ESD STM5.3.1.

T_{ON}	Power-up time			1.1	1.7	ms

1. All values over the temperature range are guaranteed through correlation and simulation. No production test is performed at the temperature range limits.
2. The offset is defined as the average value of positive and negative trip points (input voltage differences requested to change the output state in each direction).
3. The hysteresis is a built-in feature of the TS882 device. It is defined as the voltage difference between the trip points.
4. Maximum values include unavoidable inaccuracies of the industrial tests.

5 Revision history

Table 12. Document revision history

Date	Revision	Changes
18-Jan-2013	1	Initial release.
02-May-2013	2	<p>Added TS884 device to header, Description, and Table 1: Device summary.</p> <p>Updated title (added “quad” comparator).</p> <p>Updated Features and Table 2 (ESD tolerance: “6 kV” HBM replaced by “8 kV” HBM).</p> <p>Updated Description in accordance with added TS884 device.</p> <p>Added SO14, TSSOP14 and QFN16 3 x 3 mm package to Features, figure on page 1, Section 4: Package information. and Table 1: Device summary.</p> <p>Moved Figure 1: Pin connections TS882 (top view) to page 3.</p> <p>Added Figure 2: Pin connections TS884 (top view).</p> <p>Updated Table 2: Absolute maximum ratings (added TS884 device RTHJA values).</p> <p>Minor corrections throughout document.</p>
14-Jul-2014	3	Updated Table 1: Device summary on page 1.
06-Jul-2017	4	Added order code TS882IYST in Table 1: Device summary and “Automotive” in Applications .

IMPORTANT NOTICE – PLEASE READ CAREFULLY

STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, enhancements, modifications, and improvements to ST products and/or to this document at any time without notice. Purchasers should obtain the latest relevant information on ST products before placing orders.
