

Micropower low-voltage, 1.2 x 0.8 mm CSP comparator

Datasheet - production data

Features

- Supply operation from 1.8 to 5 V
- Low current consumption: 14 μ A
- Rail to rail inputs, push-pull outputs
- Low propagation delay: 300 ns
- 60 μ A supply current at 1 MHz switching frequency
- Low output saturation voltage
- Internal hysteresis
- Wide temperature range: -40 ° to 85 °C
- ESD tolerance: 2 kV HBM
- 6-bump CSP, 1.2 x 0.8 mm, 400 μ m pitch

Applications

- Mobiles phones
- Battery supplied electronics
- General purpose portable devices
- General purpose low voltage applications

Description

The TS985 is a single micropower and low voltage comparator. It can operate with a supply voltage ranging from 1.8 V to 5 V with a typical current consumption as low as 14 μ A while achieving a 300 ns propagation delay. In addition, rail-to-rail inputs make it a perfect choice for low voltage applications.

The 6-bump chip scale package (CSP) is a real advantage for overcoming space constraints.

TS985 is specified for temperature between -40 °C to 85 °C, making it ideal for a wide range of applications.

1 Absolute maximum ratings

Table 1. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage ⁽¹⁾	5.5	V
V_{id}	Differential input voltage ⁽²⁾	±5.5	
V_{in}	Input voltage ⁽³⁾	$(V_{CC}^-) - 0.3$ to $(V_{CC}^+) + 0.3$	
V_{out}	Output voltage	5.5	
I_F	Forward current in ESD protection diodes on inputs ⁽⁴⁾	10	mA
T_j	Maximum junction temperature	150	°C
T_{stg}	Storage temperature range	-65 to 150	
R_{thja}	Thermal resistance junction to ambient ⁽⁵⁾	TBA	°C/W
ESD	HBM: human body model ⁽⁶⁾	2000	V
	CDM: charged device model ⁽⁷⁾	1500	
	Latch-up immunity	200	mA

1. All voltage values, except differential voltage, are with respect to network ground terminal.
2. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.
3. Excursions of input voltages may exceed the power supply level. As long as the common mode voltage $[V_{icm}=(V_{in}^+ + V_{in}^-)/2]$ remains within the specified range, the comparator will provide a stable output state. However, the maximum current through the ESD diodes (I_F) of the input stage must strictly be observed.
4. Guaranteed by design.
5. Short-circuits can cause excessive heating and destructive dissipation. Values are typical
6. According to JEDEC standard JESD22-A114F.
7. According to ANSI/ESD STM5.3.1.
