SUPSiC PhotoRelays

- Long life (No limit on mechanical and electrical
- lifetime)Bounce-free switching
- Higher speed and high frequency switching
- Higher sensitivity (less power consumption)
- Immunity to EMI or RFI

- No have voltaic arc, bounce, and noise More
- · resistant to vibration and impact AC or DC load
- switching
- Small package size

Applications

- Telecom/Datacom switching
- Multiplexers
- Meter reading systems
- Data acquisition
- Medical equipment
- Battery monitoring
- I/O Sub-Systems

- Robotics
- Aerospace
- Home/Safety security systems
- Process Control
- **Energy Management**
- Reed Relay EMR Replacement
- Programmable Controllers

DIP type

Devices are packaged in a tube so that pin No. 1 is on the stopper B side. Observe correct orientation when mounting them on PC boards.

Using Methods

Examples of resistance value to control LED forward current (IF=5mA)

E1	R1 (Approx)
3.3V	300 Ω
5.0V	600 Ω
12V	1.9KΩ
24V	4.1K Ω

LED forward current must be more than 5mA, at I(MIN), and less than 30mA, at I(MAX).

Recommended Operating Conditions

Please obey the following conditions to ensure proper device operation and resetting. Input LED current (Recommended value):

Characteristic	Symbol	Min	Тур.	Max	Unit
Forward current	lF	5.0	7.0	30	mA

Protection Circuit

Output spike voltages:if an inductive load generates spike voltages which exceed heabsolute maximum rating, the spike voltage shall be limited.

Clamp diode is connected in parallel with the load. Absorb capacity with external diode.

CR Snubber is connected in parallel with the load. Absorb capacity with buffer capacity.

When adding diodes, buffer circuits (C-R), and other protections, they need to be installed near the MOS RELAY to be effective. Adding protection elements may result in a slow reset time, so adjust them according to the actual situation before use.

Note: When developing designs using this product, perform the expected performance of the equipment under the operating conditions recommended by the guidelines in this document. Continuous use under heavy loads (including, but not limited to, the application of high temperatures/current/voltage and significant changes in temperature, etc.) may result in deterioration of the reliability of this product.
