The TSEV01S01C90 is a contact-less temperature measuring system for OEM use based on the detection of infrared radiation.

The TSEV01S01C90 is equipped with an infrared sensor (Thermopile) in front. The Thermopile Sensor has to be pointed at the target object.

The basic working principle is:

- Detection of infrared radiation with a Thermopile sensor, which turns incoming radiation to an analogue voltage
- Determination of sensor temperature using a thermistor
- Calculation of ambient and object temperature using a processing unit
- Providing the ambient and objects temperature at digital output bus (SPI)

The TSEC01S01C is suitable for a wide range of application where non-contact temperature measurement and high accuracy are required

## FEATURES

- 0°C – 100°C Measurement Range
- Small Size
- Up to 1°C Accuracy
- 2mA Current Consumption

## APPLICATIONS

- Contact less Temperature Measurement
- Climate Control
- Industrial Process Control
- Household Applications

## ABSOLUTE MAXIMUM RATINGS

Absolute maximum ratings are limiting values of permitted operation and should never be exceeded under the worst possible conditions either initially or consequently. If exceeded by even the smallest amount, instantaneous catastrophic failure can occur. And even if the device continues to operate satisfactorily, its life may be considerably shortened.

**SAMPLE CODE**

Sample Code for sending 8 bits and reading 8 bits while sending 8 clocks.

```
// Setting directions
TRISC4 = 1;    // SDI = Input
TRISC5 = 0;    // SDO = Output
TRISC3 = 0;    // SCL = Output

// Reset SPI Lines
RC5 = 0;// SDO
RC3 = 0;// SCL
for (c = 0; c < 8; c++)
{
    cReceive = cReceive << 1;    // Shift Receive Register
    RC3 = 0;                      // SCL = 0
    RC5 = (cTransmit >> (7 - c)); // Outupt next Bit on SDO
    RC3 = 1;                      // SCL = 1
    cReceive = cReceive | RC4;    // Input next Bit on SDI
}
RC3 = 0;
RC5 = 0;
return cReceive;
```

**AMBIENT AND OBJECT TEMPERATUREMEASUREMENT**

Please refer following table for SPI commands to read object temperature and ambient temperature. Both values are transmitted in hundredth of degrees.

Com	Description	Reply	Bytes
0xA0	Sensor Temperature	Sensor temperature in hundredth of degrees Celsius	2
0xA1	Object Temperature	Object temperature in hundredth of degrees Celsius	2

**SEQUENCE OF TRANSMISSION**

Enable SCE (SCE=0) before transmission of "Command". Release SCE (SCE=1) after reading last byte.

### EXAMPLE OF TEMPERATURE CALCULATION

For reading object temperature send: 0xA1  
Return values i.e.:

Byte(0) = ??? discard reading  
Byte(1) = 0x1A (=26)  
Byte(2) = 0xB0 (=176)  
Tobj = (256 \* Byte(1) + Byte(2)) / 100 = (256 \* 26 + 176) / 100 = 68.32°C

### NAMING CONVENTION

### ORDER INFORMATION

Please order this product using following:

Part Number	Part Description
G-TPMO-022	TSEV01S01C90

### EMC

Due to the use of these modules for OEM application no CE declaration is done.  
Especially line coupled disturbances like surge, burst, HF etc. cannot be removed by the module due to the small board area and low price feature. There is no protection circuit against reverse polarity or over voltage implemented.  
The module will be designed using capacitors for blocking and ground plane areas in order to prevent wireless coupled disturbances as good as possible.
