

SN74LVC2G08

SCES198N - APRIL 1999 - REVISED DECEMBER 2015

# SN74LVC2G08 Dual 2-Input Positive-AND Gate

## **Features**

- Available in the Texas Instruments NanoStar™ and NanoFree™ Package
- Supports 5-V V<sub>CC</sub> Operation
- Inputs Accept Voltages to 5.5 V
- Max  $t_{pd}$  of 4.7 ns at 3.3 V
- Low Power Consumption, 10-µA Maximum I<sub>CC</sub>
- ±24-mA Output Drive at 3.3 V
- Typical V<sub>OLP</sub> (Output Ground Bounce)  $<0.8 \text{ V at V}_{CC} = 3.3 \text{ V}, T_A = 25^{\circ}\text{C}$
- Typical V<sub>OHV</sub> (Output V<sub>OH</sub> Undershoot) >2 V at V<sub>CC</sub> = 3.3 V, T<sub>A</sub> = 25°C
- $I_{\text{off}}$  Supports Live Insertion, Partial-Power-Down Mode, and Back-Drive Protection
- Can Be Used as a Down Translator to Translate Inputs From a Maximum of 5.5 V Down to the V<sub>CC</sub>
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 2000-V Human Body Model (A114-A)
  - 1000-V Charged-Device Model (C101)

# 2 Applications

- IP Phones: Wired and Wireless
- Optical Networking: EPON and Video Over Fiber
- Point-to-Point Microwave Backhaul
- Power: Telecom DC/DC Module: Analog
- Power: Telecom DC/DC Module: Digital
- Private Branch Exchange (PBX)
- Telecom Shelter: Power Distribution Unit (PDU)
- Vector Signal Analyzers and Generators
- Wireless Communications Testers
- Wireless Repeaters
- xDSL Modem/DSLAM

# 3 Description

This dual 2-input positive-AND gate is designed for 1.65-V to 5.5-V  $V_{CC}$  operation.

The SN74LVC2G08 device performs the Boolean function Y = A × B or Y =  $\overline{A} + \overline{B}$  in positive logic.

NanoFree package technology is а breakthrough in IC packaging concepts, using the die as the package.

This device is fully specified for partial-power-down applications using Ioff. The Ioff circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

## Device Information<sup>(1)</sup>

| PART NUMBER    | PACKAGE   | BODY SIZE (NOM)   |
|----------------|-----------|-------------------|
| SN74LVC2G08DCT | SM8 (8)   | 2.95 mm × 2.80 mm |
| SN74LVC2G08DCU | VSSOP (8) | 2.30 mm × 2.00 mm |
| SN74LVC2G08YZP | DSBGA (8) | 1.91 mm × 0.91 mm |

(1) For all available packages, see the orderable addendum at the end of the data sheet.

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

# 6.2 ESD Ratings

|                    |               |   | VALUE | UNIT |
|--------------------|---------------|---|-------|------|
| V                  | Electrostatic | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)              | ±2000 | V    |
| V <sub>(ESD)</sub> | discharge     | Charged-device model (CDM), per JEDEC specification JESD22-C101 (2) | ±1000 | V    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

<sup>(2)</sup> The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.

<sup>(3)</sup> The value of V<sub>CC</sub> is provided in the *Recommended Operating Conditions* table.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

# 8 Detailed Description

#### 8.1 Overview

The SN74LVC1G06 device contains two positive-AND gates with a maximum sink current of 24 mA. A very low tpd of 4.7ns at 3.3V makes the device ideal for high speed applications. Additionally, 5.5V tolerant inputs allow the device to be used as a down translator if needed.

# 8.2 Functional Block Diagram

# 8.3 Feature Description

## 8.3.1 Down Voltage Translation

SN74LVC2G08 allows for logic input and output signals up to 5.5 V. While operating at  $V_{CC}$  of 3.3 V, the device will still recognize 5.5 V as a valid high input, however, the resulting output will be 3.3 V. This is the same for other voltage levels in the device effectively down translating any input logic level higher than  $V_{CC}$  but lower or equal to 5.5 V.

#### 8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74LVC2G08.

**Table 1. Function Table** 

|   | INPUTS | OUTPUT |  |  |  |  |
|---|--------|--------|--|--|--|--|
| Α | В      | Y      |  |  |  |  |
| Н | Н      | Н      |  |  |  |  |
| L | X      | L      |  |  |  |  |
| Х | L      | L      |  |  |  |  |

# 9 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

# 9.1 Application Information

The SN74LVC2G08 is a high-drive CMOS device that can be used for implementing AND logic with a high output drive, such as an LED application. It can produce 24 mA of drive current at 3.3 V, making it Ideal for driving multiple outputs and good for high-speed applications up to 100 MHz. The inputs are 5.5-V tolerant allowing it to translate down to  $V_{\rm CC}$ .

# 9.2 Typical Application

Figure 4. Typical Application

## 9.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Tak care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads so routing and load conditions must be considered to prevent ringing.

#### 9.2.2 Detailed Design Procedure

- 1. Recommended Input Conditions
  - Rise time and fall time specs. See (Δt/ΔV) in the Recommended Operating Conditions table.
  - Specified high and low levels. See (V<sub>IH</sub> and V<sub>IL</sub>) in the Recommended Operating Conditions table.
  - Inputs are overvoltage tolerant allowing them to go as high as (V<sub>I</sub> maximum) in the Recommended Operating Conditions table at any valid V<sub>CC</sub>.

#### 2. Recommended Output Conditions

- Load currents must not exceed (I<sub>O</sub> maximum) per output and must not exceed total current (continuous current through V<sub>CC</sub> or GND) for the part. These limits are located in the *Recommended Operating* Conditions table.
- Outputs must not be pulled above V<sub>CC</sub> in normal operating conditions.

Submit Documentation Feedback

# **Typical Application (continued)**

## 9.2.3 Application Curves

Figure 5. I<sub>CC</sub> vs Frequency

# 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions* table. Each  $V_{CC}$  pin must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu$ F capacitor is recommended and if there are multiple  $V_{CC}$  pins then 0.01- $\mu$ F or 0.022- $\mu$ F capacitor is recommended for each power pin. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu$ F and 1- $\mu$ F capacitors are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results

# 11 Layout

#### 11.1 Layout Guidelines

When using multiple bit logic devices inputs must not ever float. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified below are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V<sub>CC</sub> whichever make more sense or is more convenient.

#### 11.2 Layout Example

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## PACKAGE OPTION ADDENDUM

29-Jan-2021

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

|    | -   |
|----|---|
| A0 | Dimension designed to accommodate the component width     |
| В0 | Dimension designed to accommodate the component length    |
| K0 | Dimension designed to accommodate the component thickness |
| W  | Overall width of the carrier tape                         |
| P1 | Pitch between successive cavity centers                   |

## QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

#### \*All dimensions are nominal

## NOTES:

- 1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
  4. Reference JEDEC registration MO-187 variation CA.

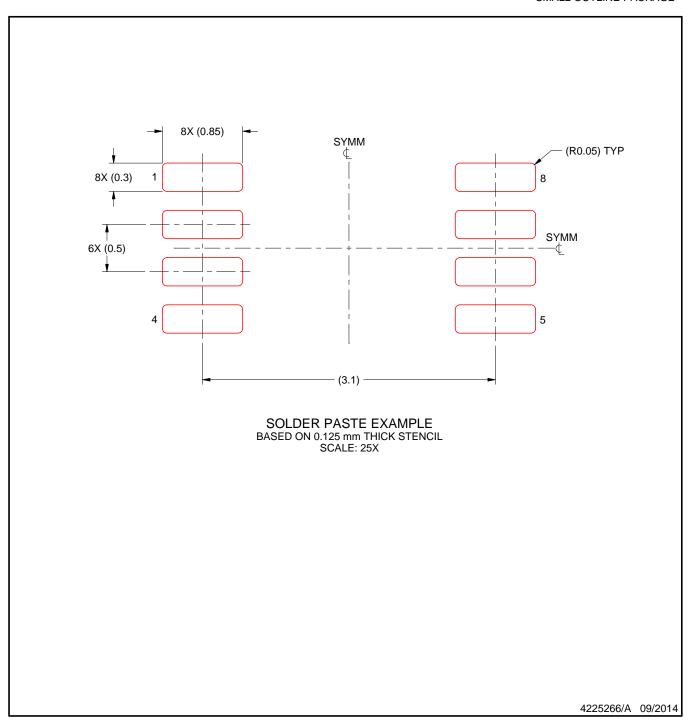

NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

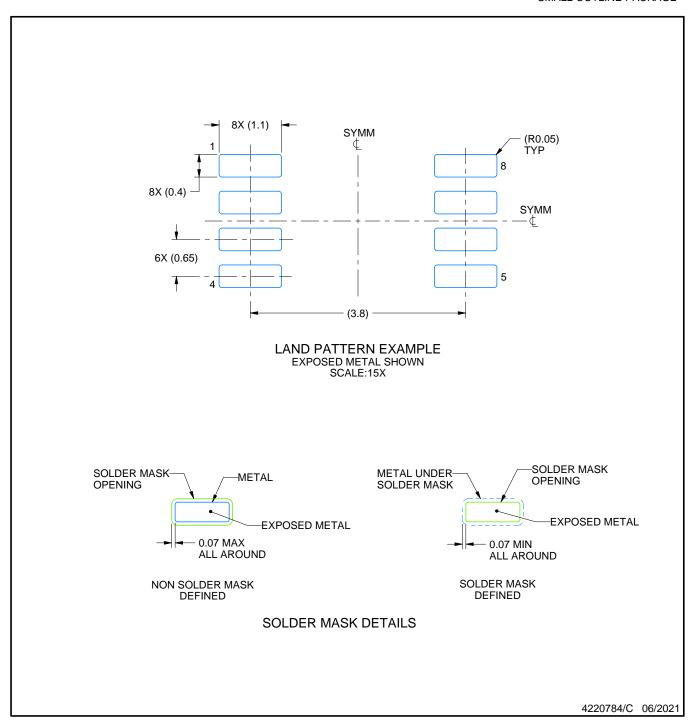

## NOTES:

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not
- exceed 0.15 mm per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.

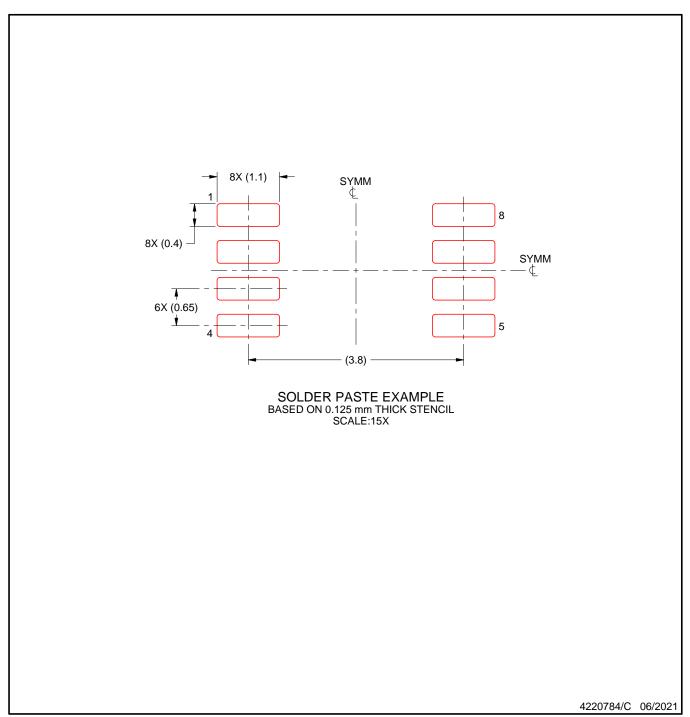

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

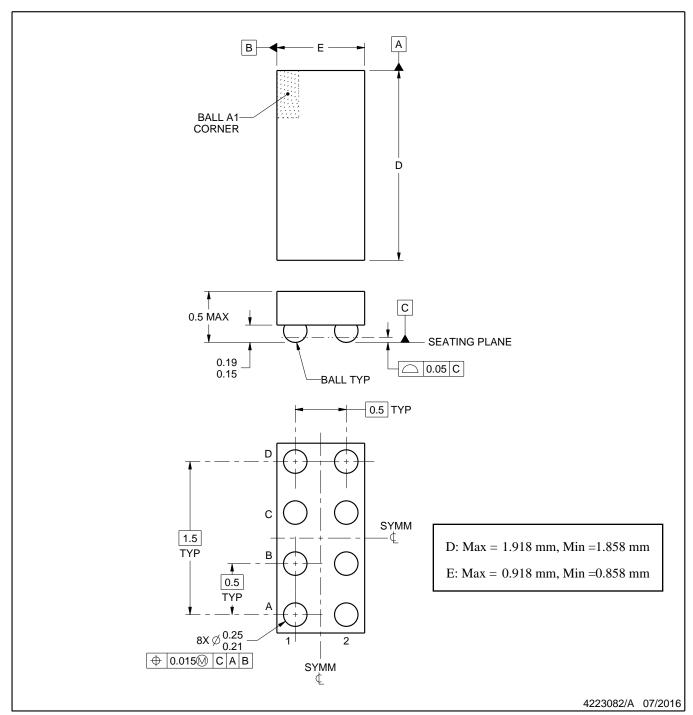

NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

DIE SIZE BALL GRID ARRAY

## NOTES:

- All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
- 2. This drawing is subject to change without notice.

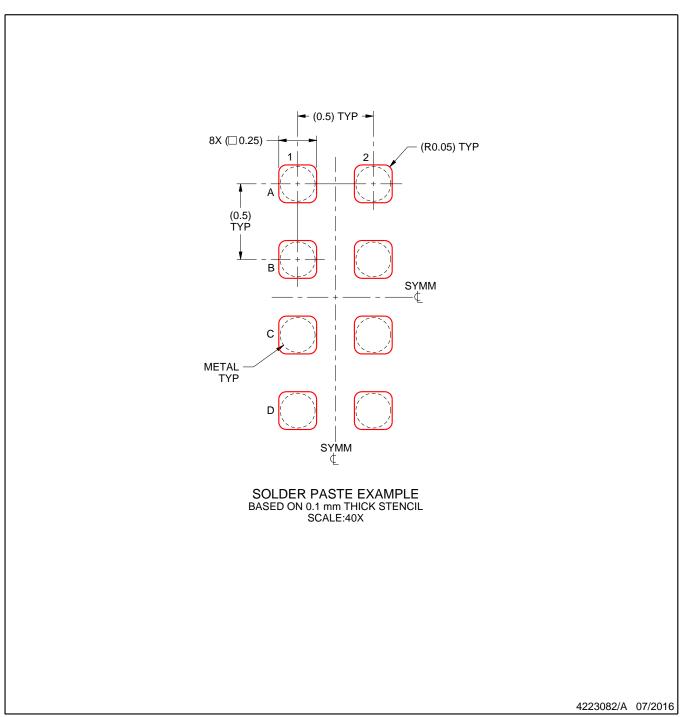

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

3. Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints. For more information, see Texas Instruments literature number SNVA009 (www.ti.com/lit/snva009).

DIE SIZE BALL GRID ARRAY

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.
