

SN65176B, SN75176B

SLLS101H - JULY 1985 - REVISED DECEMBER 2021

# **SNx5176B Differential Bus Transceivers**

#### 1 Features

- Bidirectional transceivers
- Meet or exceed the requirements of ANSI standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27
- Designed for multipoint transmission on long bus lines in noisy environments
- 3-State driver and receiver outputs
- Individual driver and receiver enables
- Wide positive and negative input/output bus voltage ranges
- ± 60-mA Maximum driver output capability
- Thermal shutdown protection
- Driver positive and negative current limiting
- 12-kΩ Minimum Receiver Input Impedance
- ± 200-mV Receiver input sensitivity
- 50-mV Typical receiver input hysteresis
- Operate from single 5-V supply

#### 2 Applications

- Chemical and gas sensors
- Digital signage
- HMI (human machine interfaces)
- Motor controls: AC induction, brushed and brushless dc, low- and high-voltage, stepper motors, and permanent magnets
- **TETRA Base stations**
- Telecom towers: remote electrical tilt units (ret) and tower mounted amplifiers (TMA)
- Weigh scales
- Wireless repeaters

#### 3 Description

The SN65176B and SN75176B differential bus transceivers are designed for bidirectional data communication on multipoint bus transmission lines. They are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/ EIA-485-A and ITU Recommendations V.11 and X.27.

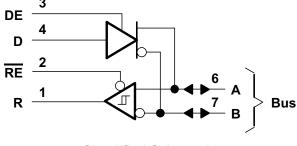

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have activehigh and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or  $V_{CC} = 0$ . These ports feature wide positive and negative common-mode voltage ranges, making the device suitable for partyline applications.

The driver is designed for up to 60 mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately 150°C. The receiver features a minimum input impedance of 12 k $\Omega$ , an input sensitivity of ±200 mV, and a typical input hysteresis of 50 mV.

#### **Device Information**

| PART NUMBER | PACKAGE (PIN)(1) | BODY SIZE (NOM)   |
|-------------|------------------|-------------------|
|             | SOIC (8)         | 4.90 mm × 3.91 mm |
| SNx5176     | PDIP (8)         | 9.81 mm × 6.35 mm |
|             | SOP (8)          | 6.20 mm × 5.30 mm |

For all available packages, see the orderable addendum at the end of the datasheet.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 1 7.3 Feature Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ## **6 Specifications**

#### **6.1 Absolute Maximum Ratings**

over operating free-air temperature range (unless otherwise noted)(1)

|                  |                                                              | MIN | MAX | UNIT |
|------------------|--------------------------------------------------------------|-----|-----|------|
| V <sub>CC</sub>  | Supply voltage <sup>(2)</sup>                                |     | 7   | V    |
|                  | Voltage range at any bus terminal                            | -10 | 15  | V    |
| VI               | Enable input voltage                                         |     | 5.5 | V    |
| TJ               | Operating virtual junction temperature                       |     | 150 | °C   |
| T <sub>stg</sub> | Storage temperature range                                    | -65 | 150 | °C   |
|                  | Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds |     | 260 | °C   |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Section 6.2 is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### **6.2 Recommended Operating Conditions**

|                                   |                                           |                 | MIN  | TYP | MAX  | UNIT |
|-----------------------------------|-------------------------------------------|-----------------|------|-----|------|------|
| V <sub>CC</sub>                   | Supply voltage                            |                 | 4.75 | 5   | 5.25 | V    |
| V <sub>I</sub> or V <sub>IC</sub> | Voltage at any bus terminal (separately   | or common mode) | -7   |     | 12   | V    |
| V <sub>IH</sub>                   | High-level input voltage                  | D, DE, and RE   | 2    |     |      | V    |
| V <sub>IL</sub>                   | Low-level input voltage                   | D, DE, and RE   |      |     | 0.8  | V    |
| V <sub>ID</sub>                   | Differential input voltage <sup>(1)</sup> |                 |      |     | ±12  | V    |
| 1                                 | High-level output current                 | Driver          |      |     | -60  | mA   |
| I <sub>OH</sub>                   |                                           | Receiver        |      |     | -400 | μA   |
|                                   | Low-level output current                  | Driver          |      |     | 60   |      |
| l <sub>OL</sub>                   |                                           | Receiver        |      |     | 8    | mA   |
| <b>-</b>                          | Operating free-air temperature            | SN65176B        | -40  |     | 105  | °C   |
| T <sub>A</sub>                    |                                           | SN75176B        | 0    |     | 70   | C    |

<sup>(1)</sup> Differential input/output bus voltage is measured at the non-inverting terminal A, with respect to the inverting terminal B.

#### **6.3 Thermal Information**

<sup>(1)</sup> The power-off measurement in ANSI Standard TIA/EIA-422-B applies to disabled outputs only and is not applied to combined inputs and outputs.

<sup>(2)</sup> All typical values are at  $V_{CC} = 5 \text{ V}$  and  $T_A = 25^{\circ}\text{C}$ .

<sup>(3)</sup>  $\Delta |V_{OD}|$  and  $\Delta |V_{OC}|$  are the changes in magnitude of  $V_{OD}$  and  $V_{OC}$ , respectively, that occur when the input is changed from a high level to a low level

<sup>(4)</sup> The minimum  $V_{OD2}$  with a 100-Ω load is either ½  $V_{OD1}$  or 2 V, whichever is greater.

<sup>(5)</sup> See ANSI Standard TIA/EIA-485-A, Figure 3.5, Test Termination Measurement 2.

<sup>(6)</sup> This applies for both power on and off, refer to ANSI Standard TIA/EIA-485-A for exact conditions. The TIA/EIA-422-B limit does not apply for a combined driver and receiver terminal.

#### 7 Detailed Description

#### 7.1 Overview

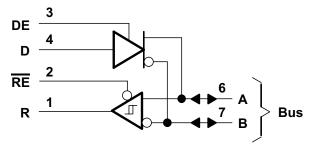

The SN65176B and SN75176B differential bus transceivers are integrated circuits designed for bidirectional data communication on multipoint bus transmission lines. They are designed for balanced transmission lines and meet ANSI Standards TIA/EIA-422-B and TIA/EIA-485-A and ITU Recommendations V.11 and X.27.

The SN65176B and SN75176B devices combine a 3-state differential line driver and a differential input line receiver, both of which operate from a single 5-V power supply. The driver and receiver have active-high and active-low enables, respectively, that can be connected together externally to function as a direction control. The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or  $V_{CC} = 0$ . These ports feature wide positive and negative common-mode voltage ranges, making the device suitable for party-line applications.

The driver is designed for up to 60 mA of sink or source current. The driver features positive and negative current limiting and thermal shutdown for protection from line-fault conditions. Thermal shutdown is designed to occur at a junction temperature of approximately  $150^{\circ}$ C. The receiver features a minimum input impedance of 12 k $\Omega$ , an input sensitivity of  $\pm 200$  mV, and a typical input hysteresis of 50 mV.

The SN65176B and SN75176B devices can be used in transmission-line applications employing the SN75172 and SN75174 quadruple differential line drivers and SN75173 and SN75175 quadruple differential line receivers.

#### 7.2 Functional Block Diagram

#### 7.3 Feature Description

#### 7.3.1 Driver

The driver converts a TTL logic signal level to RS-422 and RS-485 compliant differential output. The TTL logic input, DE pin, can be used to turn the driver on and off.

Table 7-1. Driver Function Table (1)

| INPUT | ENABLE | DIFFERENT | IAL OUTPUTS |
|-------|--------|-----------|-------------|
| D     | DE     | Α         | В           |
| Н     | Н      | Н         | L           |
| L     | Н      | L         | Н           |
| X     | L      | Z         | Z           |

(1) H = high level,

L = low level,

X = irrelevant,

Z = high impedance (off)

#### 7.3.2 Receiver

The receiver converts a RS-422 or RS-485 differential input voltage to a TTL logic level output. The TTL logic input,  $\overline{\text{RE}}$  pin, can be used to turn the receiver logic output on and off.

Table 7-2. Receiver Function Table (1)

| DIFFERENTIAL INPUTS<br>A-B       | ENABLE<br>RE | OUTPUT<br>R |
|----------------------------------|--------------|-------------|
| V <sub>ID</sub> ≥ 0.2 V          | L            | Н           |
| -0.2 V < V <sub>ID</sub> < 0.2 V | L            | U           |
| V <sub>ID</sub> ≤ -0.2 V         | L            | L           |
| X                                | н            | Z           |
| Open                             | L            | U           |

<sup>(1)</sup> H = high level,

#### 7.4 Device Functional Modes

#### 7.4.1 Device Powered

Both the driver and receiver can be individually enabled or disabled in any combination. DE and  $\overline{RE}$  can be connected together for a single port direction control bit.

#### 7.4.2 Device Unpowered

The driver differential outputs and the receiver differential inputs are connected internally to form differential input/output (I/O) bus ports that are designed to offer minimum loading to the bus when the driver is disabled or  $V_{CC} = 0$ .

#### 8 Application and Implementation

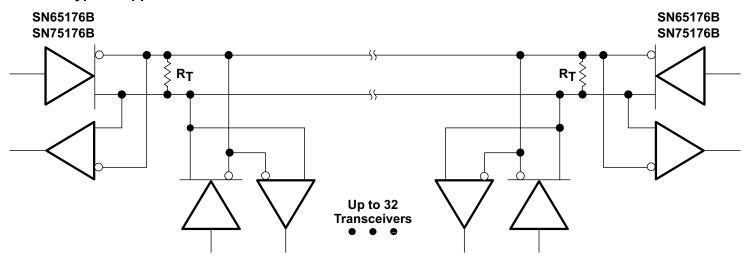

#### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

#### **8.1 Application Information**

The device can be used in RS-485 and RS-422 physical layer communications.

#### 8.2 Typical Application

The line should be terminated at both ends in its characteristic impedance  $@_T = Z_O$ ). Stub lengths off the main line should be kept as short as possible.

Figure 8-1. Typical RS-485 Application Circuit

#### 8.2.1 Design Requirements

- 5-V power source
- RS-485 bus operating at 10 Mbps or less
- Connector that ensures the correct polarity for port pins
- External fail safe implementation

#### 8.2.2 Detailed Design Procedure

- Place the device close to bus connector to keep traces (stub) short to prevent adding reflections to the bus line
- If desired, add external fail-safe biasing to ensure +200 mV on the A-B port.

#### 8.2.3 Application Curves

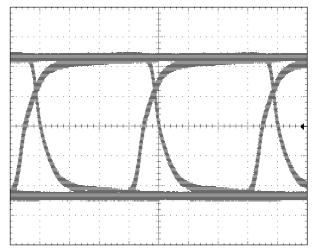

Figure 8-2. Eye Diagram for 10-Mbits/s over 100 feet of standard CAT-5E cable 120-Ω Termination at both ends. Scale is 1 V per division and 25 nS per division

# 8.3 System Examples

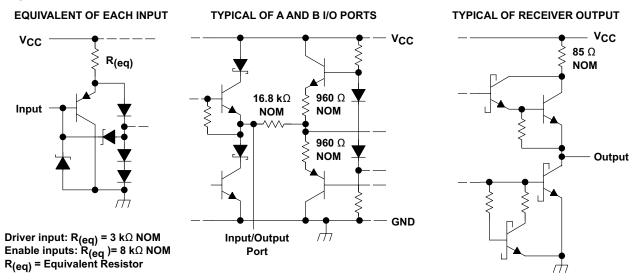

Figure 8-3. Schematics of Inputs and Outputs

# 9 Power Supply Recommendations

Power supply should be 5 V with a tolerance less than 10%

#### 10 Layout

# 10.1 Layout Guidelines

Traces from device pins A and B to connector must be short and capable of 250 mA maximum current.

### 10.2 Layout Example

#### 11.2 Trademarks

All trademarks are the property of their respective owners.

#### 11.3 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 11.4 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

#### 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. <sup>(1)</sup> The marketing status values are defined as follows: ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

11-Mar-2023 www.ti.com

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

SMALL OUTLINE INTEGRATED CIRCUIT

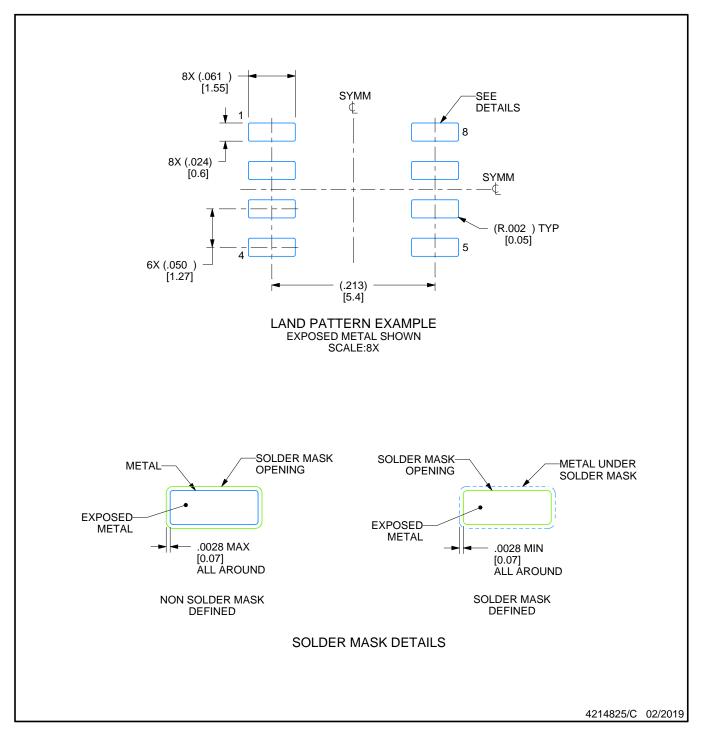

#### NOTES:

- 1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- 2. This drawing is subject to change without notice.
- 3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
- 4. This dimension does not include interlead flash.
- 5. Reference JEDEC registration MS-012, variation AA.

SMALL OUTLINE INTEGRATED CIRCUIT

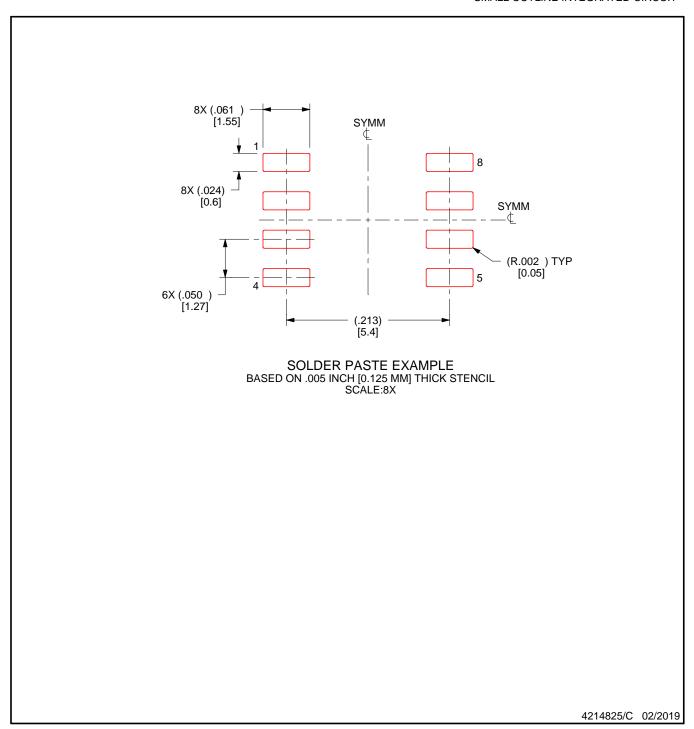

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES: (continued)

- 8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 9. Board assembly site may have different recommendations for stencil design.

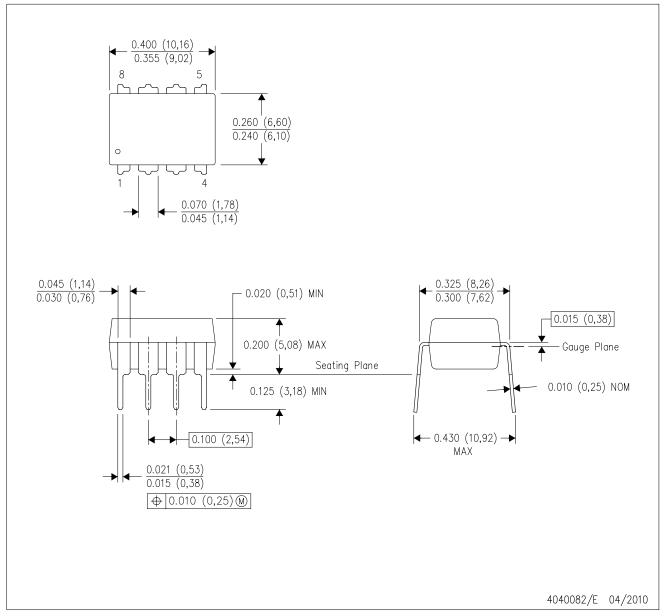

NOTES: A. All linear dimensions are in millimeters.

B. This drawing is subject to change without notice.

C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

# P (R-PDIP-T8)

# PLASTIC DUAL-IN-LINE PACKAGE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. Falls within JEDEC MS-001 variation BA.
