

## SDIO PORT EXPANDER WITH VOLTAGE-LEVEL TRANSLATION

### FEATURES

- 6-to-12 Demultiplexer/Multiplexer Allows SDIO Port Expansion
- Built-in Level Translator Eliminates Voltage Mismatch Between Baseband and SD Card or SDIO Peripheral
- $V_{CCA}$ ,  $V_{CCB0}$ , and  $V_{CCB1}$  Each Operate Over Full 1.1-V to 3.6-V Range
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance A Port
  - 2000-V Human-Body Model (A114-B)
  - 100-V Machine Model (A115-A)
  - 1500-V Charged-Device Model (C101)
- $\pm 8$ -kV Contact Discharge IEC 61000-4-2 ESD Performance (B Port)

### DESCRIPTION/ORDERING INFORMATION

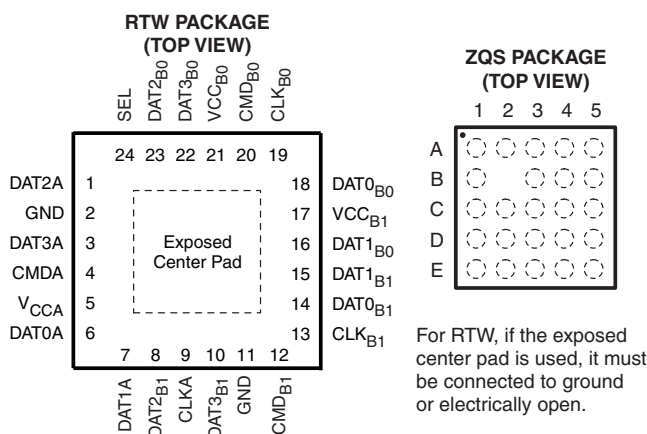

The TXS02612 is designed to interface the cell phone baseband with external SDIO peripherals. The device includes a 6-channel SPDT switch with voltage-level translation capability. This allows a single SDIO port to be interfaced with two SDIO peripherals. The TXS02612 has three separate supply rails that operate over the full range of 1.1 V to 3.6 V. This allows the baseband and SDIO peripherals to operate at different supply voltages if required.

The select (SEL) input is used to choose between the B0 port and B1 port. When SEL = Low, B0 port is selected; when SEL = High, B1 port is selected. SEL is referenced to  $V_{CCA}$ . For the unselected B port, the clock output is held low, whereas the data and command I/Os are pulled high to their respective  $V_{CCB}$  through a 70-k $\Omega$  resistor ( $\pm 30\%$  tolerance).

#### ORDERING INFORMATION<sup>(1)</sup>

$T_A$	PACKAGE <sup>(2)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	MicroStar Junior™ BGA (VFBGA) – ZQS	Reel of 3000	TXS02612ZQSR	YJ612
	QFN – RTW	Reel of 3000	TXS02612RTWR	YJ612

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at [www.ti.com](http://www.ti.com).
- (2) Package drawings, thermal data, and symbolization are available at [www.ti.com/packaging](http://www.ti.com/packaging).

**SIMPLIFIED INTERNAL STRUCTURE**

Simplified Architecture of Command and Each Data Path

Simplified Architecture of the Clock Path

- A.  $R_1$  and  $R_2$  resistor values are determined based upon the logic level applied to the A port or B port, as follows:  
 $R_1$  and  $R_2 = 40\text{ k}\Omega$  when a logic level low is applied to the A port or B port.  
 $R_1$  and  $R_2 = 4\text{ k}\Omega$  when a logic level high is applied to the A port or B port.  
 $R_1$  and  $R_2 = 70\text{ k}\Omega$  when the port is deselected.

**FUNCTION TABLE**

Clock Channel			
SEL	CLKB0	CLKB1	OPERATION
L	Active	Low	CLKA to CLKB0
H	Low	Active	CLKA to CLKB1
Data and Command Channel			
SEL	DATxB0 or CMDxB0	DATxB1 or CMDxB1	OPERATION
L	Active	Disabled, pulled to $V_{CCB1}$ through 70 k $\Omega$	DATxA to DATxB0, CMDA to CMDB0
H	Disabled, pulled to $V_{CCB0}$ through 70 k $\Omega$	Active	DATxA to DATxB1, CMDA to CMDB1

**ABSOLUTE MAXIMUM RATINGS<sup>(1) (2)</sup>**

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
$V_{CCA}$ $V_{CCB0}$ $V_{CCB1}$	Supply voltage range <sup>(2)</sup>		-0.5	4.6	V
$V_I$	Input voltage range	A port, B0 port, B1 port, control inputs	-0.5	$V_{CCx} + 0.5$	V
$V_O$	Voltage range applied to any output in the high-impedance or power-off state	A port, B0 port, B1 port	-0.5	$V_{CCx} + 0.5$	V
$I_{IK}$	Input clamp current	$V_I < 0$		-50	mA
$I_{OK}$	Output clamp current	$V_O < 0$		-50	mA
$I_{CC}/$ $I_{GND}$	Continuous current through $V_{CCA}$ , $V_{CCB0}$ , $V_{CCB1}$ , or GND			$\pm 100$	mA
$T_{stg}$	Storage temperature range		-65	150	$^{\circ}\text{C}$

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

## POWER-UP CONSIDERATIONS

The following power-up sequence for this TXS02612 SDIO port expander with voltage-level translator should be followed to ensure proper operation and to avoid any unnecessary excessive supply current, bus contention, oscillations, or other anomalies caused by improperly biased device pins. The following power-up sequence should be used to safe-guard against these problems:

1. Connect the ground pin of the device first before any power-supply voltage is applied.
2. Connect and power up  $V_{CCA}$ , which internally powers up the SEL control logic of the TXS02612.
3. Depending on the port to be chosen, the SEL pin can be high or low. If SEL high is needed (i.e., A port to B<sub>1</sub> port), ramp the SEL pin with the  $V_{CCA}$  power supply. Otherwise, keep SEL Low.
4. Apply  $V_{CCB0}$  and  $V_{CCB1}$  only after the  $V_{CCA}$  power supply is applied.

**PARAMETER MEASUREMENT INFORMATION**

**DATA RATE, PULSE DURATION, PROPAGATION DELAY, ENABLE/DISABLE OUTPUT RISE AND FALL TIME MEASUREMENT USING A PUSH-PULL DRIVER**

**DATA RATE, PULSE DURATION, PROPAGATION DELAY, OUTPUT RISE AND FALL TIME MEASUREMENT USING AN OPEN-DRAIN DRIVER**

**VOLTAGE WAVEFORMS PULSE DURATION**

**VOLTAGE WAVEFORMS PROPAGATION DELAY TIMES**

**VOLTAGE WAVEFORMS ENABLE AND DISABLE TIMES**

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR = 10 MHz,  $Z_O = 50\Omega$ ,  $dv/dt \geq 1$  V/ns.
  - D. The outputs are measured one at a time, with one transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{cd}$ .
  - H.  $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
  - I.  $V_{CCO}$  is the  $V_{CC}$  associated with the output port.
  - J. All parameters and waveforms are not applicable to all devices.

**Figure 1. Load Circuit and Voltage Waveforms**

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TXS02612RTWR	ACTIVE	WQFN	RTW	24	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	YJ612	<b>Samples</b>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
