

# ISO774x High-Speed, Robust-EMC Reinforced and Basic Quad-Channel Digital Isolators

## 1 Features

- 100Mbps data rate
- Robust isolation barrier:
  - >30-year projected lifetime at 1500V<sub>RMS</sub> working voltage
  - Up to 5000V<sub>RMS</sub> isolation rating
  - Up to 12.8kV surge capability
  - ±100kV/μs typical CMTI
- Wide supply range: 2.25V to 5.5V
- 2.25V to 5.5V level translation
- Default output *high* (ISO774x) and *low* (ISO774xF) options
- Wide temperature range: –55°C to 125°C
- Low power consumption, typical 1.5mA per channel at 1Mbps
- Low propagation delay: 10.7ns typical (5V Supplies)
- Robust electromagnetic compatibility (EMC)
  - System-level ESD, EFT, and surge immunity
  - ±8kV IEC 61000-4-2 contact discharge protection across isolation barrier
  - Low emissions
- Wide-SOIC (DW-16) and QSOP (DBQ-16) package options
- Automotive version available: [ISO774x-Q1](#)
- Safety-related certifications:
  - DIN EN IEC 60747-17 (VDE 0884-17)
  - UL 1577 component recognition program
  - IEC 61010-1, IEC 62368-1, IEC 60601-1, and GB 4943.1 certifications

## 2 Applications

- [Industrial automation](#)
- [Motor control](#)
- [Power supplies](#)
- [Solar inverters](#)
- [Medical equipment](#)

## 3 Description

The ISO774x devices are high-performance, quad-channel digital isolators with 5000V<sub>RMS</sub> (DW package) and 3000V<sub>RMS</sub> (DBQ package) isolation ratings per UL 1577. This family includes devices with reinforced insulation ratings according to VDE, CSA, TUV and CQC. The ISO7741B device is designed for applications that require basic insulation ratings only.

The ISO774x devices provide high electromagnetic immunity and low emissions at low power consumption, while isolating CMOS or LVCMOS

digital I/Os. Each isolation channel has a logic input and output buffer separated by a double capacitive silicon dioxide (SiO<sub>2</sub>) insulation barrier. These devices come with enable pins which can be used to put the respective outputs in high impedance for multi-master driving applications and to reduce power consumption. The ISO7740 device has all four channels in the same direction, the ISO7741 device has three forward and one reverse-direction channels, and the ISO7742 device has two forward and two reverse-direction channels. If the input power or signal is lost, default output is *high* for devices without suffix F and *low* for devices with suffix F. See the [Device Functional Modes](#) section for further details.

### Package Information

PART NUMBER	PACKAGE <sup>(1)</sup>	PACKAGE SIZE <sup>(2)</sup>	BODY SIZE (NOM)
ISO7740 ISO7741 ISO7742	SOIC (DW)	10.30mm × 10.30mm	10.30mm × 7.50mm
	SSOP (DBQ)	4.90mm × 6.0mm	4.90mm × 3.90mm
ISO7741B	SOIC (DW)	10.30mm × 10.30mm	10.30mm × 7.50mm

- (1) For all available packages, see the orderable addendum at the end of the data sheet.
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

## 4 Description Continued

Used in conjunction with isolated power supplies, these devices help prevent noise currents on data buses, such as RS-485, RS-232, and CAN, or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. Through innovative chip design and layout techniques, electromagnetic compatibility of the ISO774x devices have been significantly enhanced to ease system-level ESD, EFT, surge, and emissions compliance. The ISO774x devices are available in 16-pin SOIC and QSOP packages.

## 5 Pin Configuration and Functions

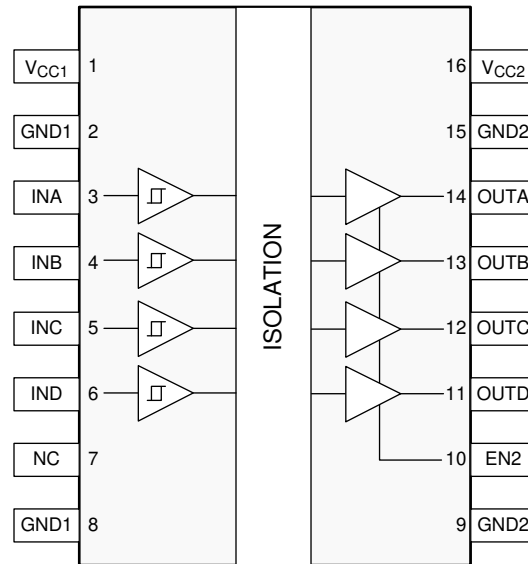

Figure 5-1. ISO7740 DW and DBQ Packages 16-Pin SOIC-WB and QSOP Top View

**Figure 5-2. ISO7741 DW and DBQ Packages 16-Pin SOIC-WB and QSOP Top View**

**Figure 5-3. ISO7742 DW and DBQ Packages 16-Pin SOIC-WB and QSOP Top View**

Table 5-1. Pin Functions

NAME	PIN			Type <sup>1</sup>	DESCRIPTION
	ISO7740	ISO7741	ISO7742		
EN1	—	7	7	I	Output enable 1. Output pins on side 1 are enabled when EN1 is high or open and in high-impedance state when EN1 is low.
EN2	10	10	10	I	Output enable 2. Output pins on side 2 are enabled when EN2 is high or open and in high-impedance state when EN2 is low.
GND1	2	2	2	—	Ground connection for $V_{CC1}$
	8	8	8		
GND2	9	9	9	—	Ground connection for $V_{CC2}$
	15	15	15		
INA	3	3	3	I	Input, channel A
INB	4	4	4	I	Input, channel B
INC	5	5	12	I	Input, channel C
IND	6	11	11	I	Input, channel D
NC	7	—	—	—	Not connected
OUTA	14	14	14	O	Output, channel A
OUTB	13	13	13	O	Output, channel B
OUTC	12	12	5	O	Output, channel C
OUTD	11	6	6	O	Output, channel D

$V_{CC2}$	16	16	16	—	Power supply, side 2

1. I = Input, O = Output

## 6 Specifications

### 6.1 Absolute Maximum Ratings

See<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC1}, V_{CC2}$	Supply voltage <sup>(2)</sup>	-0.5	6	V
V	Voltage at INx, OUTx, ENx	-0.5	$V_{CCX} + 0.5$ <sup>(3)</sup>	V
$I_O$	Output current	-15	15	mA
$T_J$	Junction temperature		150	°C
$T_{stg}$	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values
- (3) Maximum voltage must not exceed 6 V.

### 6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins	±6000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins	±1500	
		Contact discharge per IEC 61000-4-2; Isolation barrier withstand test <sup>(1) (2)</sup>	±8000	

- (1) IEC ESD strike is applied across the barrier with all pins on each side tied together creating a two-terminal device.
- (2) Testing is carried out in air or oil to determine the intrinsic contact discharge capability of the device.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
$V_{CC1}, V_{CC2}$	Supply Voltage	2.25		5.5	V
$V_{CC(UVLO+)}$	UVLO threshold when supply voltage is rising		2	2.25	V
$V_{CC(UVLO-)}$	UVLO threshold when supply voltage is falling	1.7	1.8		V
$V_{HYS(UVLO)}$	Supply voltage UVLO hysteresis	100	200		mV
$I_{OH}$	High level output current	$V_{CCO} = 5\text{ V}$ <sup>(1)</sup>		-4	mA
		$V_{CCO} = 3.3\text{ V}$		-2	
		$V_{CCO} = 2.5\text{ V}$		-1	
$I_{OL}$	Low level output current	$V_{CCO} = 5\text{ V}$		4	mA
		$V_{CCO} = 3.3\text{ V}$		2	
		$V_{CCO} = 2.5\text{ V}$		1	
$V_{IH}$	High level Input voltage	$0.7 \times V_{CCI}$ <sup>(1)</sup>		$V_{CCI}$	V
$V_{IL}$	Low level Input voltage	0		$0.3 \times V_{CCI}$	V
DR	Data Rate <sup>(2)</sup>	0		100	Mbps
$T_A$	Ambient temperature	-55	25	125	°C

(1)  $V_{CCI}$  = Input-side  $V_{CC}$ ;  $V_{CCO}$  = Output-side  $V_{CC}$ .

(2) 100 Mbps is the maximum specified data rate, although higher data rates are possible.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		ISO774x		UNIT
		DW (SOIC)	DBQ (QSOP)	
		16 PINS	16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	83.4	109	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	46	54.4	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	48	51.9	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	19.1	14.2	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	47.5	51.4	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

## 6.5 Power Ratings

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>ISO7740</b>						
$P_D$	Maximum power dissipation (both sides)	$V_{CC1} = V_{CC2} = 5.5\text{ V}$ , $T_J = 150^\circ\text{C}$ , $C_L = 15\text{ pF}$ , Input a 50-MHz 50% duty cycle square wave			210	mW
$P_{D1}$	Maximum power dissipation (side-1)				45	mW
$P_{D2}$	Maximum power dissipation (side-2)				165	mW
<b>ISO7741</b>						
$P_D$	Maximum power dissipation (both sides)	$V_{CC1} = V_{CC2} = 5.5\text{ V}$ , $T_J = 150^\circ\text{C}$ , $C_L = 15\text{ pF}$ , Input a 50-MHz 50% duty cycle square wave			210	mW
$P_{D1}$	Maximum power dissipation (side-1)				75	mW
$P_{D2}$	Maximum power dissipation (side-2)				135	mW
<b>ISO7742</b>						
$P_D$	Maximum power dissipation (both sides)	$V_{CC1} = V_{CC2} = 5.5\text{ V}$ , $T_J = 150^\circ\text{C}$ , $C_L = 15\text{ pF}$ , Input a 50-MHz 50% duty cycle square wave			210	mW
$P_{D1}$	Maximum power dissipation (side-1)				105	mW
$P_{D2}$	Maximum power dissipation (side-2)				105	mW

### 6.6 Insulation Specifications

PARAMETER		TEST CONDITIONS	VALUE		UNIT	
			DW-16	DBQ-16		
CLR	External clearance <sup>(1)</sup>	Shortest terminal-to-terminal distance through air		>8	>3.7	mm
CPG	External creepage <sup>(1)</sup>	Shortest terminal-to-terminal distance across the package surface		>8	>3.7	mm
DTI	Distance through the insulation	Minimum internal gap (internal clearance)		>17	>17	µm
CTI	Comparative tracking index	DIN EN 60112 (VDE 0303-11); IEC 60112		>600	>600	V
	Material group	According to IEC 60664-1		I	I	
	Overvoltage category per IEC 60664-1	Rated mains voltage ≤ 300 V <sub>RMS</sub>		I-IV	I-III

<b>UL 1577</b>						

PARAMETER		TEST CONDITIONS	VALUE		UNIT
			DW-16	DBQ-16	
$V_{ISO}$	Maximum withstanding isolation voltage	$V_{TEST} = V_{ISO}$ , $t = 60$ s (qualification), $V_{TEST} = 1.2 \times V_{ISO}$ , $t = 1$ s (100% production)	5000	3000	$V_{RMS}$

- (1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves and/or ribs on a printed-circuit board are used to help increase these specifications.
- (2) This coupler is suitable for *safe electrical insulation* only within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.
- (3) Testing is carried out in air to determine the surge immunity of the package.
- (4) Testing is carried out in oil to determine the intrinsic surge immunity of the isolation barrier.
- (5) Apparent charge is electrical discharge caused by a partial discharge (pd).
- (6) All pins on each side of the barrier tied together creating a two-terminal device.

### 6.7 Safety-Related Certifications

VDE	CSA	UL	CQC	TUV
Certified according to DIN EN IEC 60747-17 (VDE 0884-17)	Certified according to IEC 62368-1 and IEC 60601-1	Certified according to UL 1577 Component Recognition Program	Certified according to GB 4943.1	Certified according to EN 61010-1 and EN 62368-1
Maximum transient isolation voltage, 8000 V <sub>PK</sub> (DW-16) and 4242 V <sub>PK</sub> (DBQ-16); Maximum repetitive peak isolation voltage, 2121 V <sub>PK</sub> (DW-16, Reinforced), 1414 V <sub>PK</sub> (DW-16, Basic) and 566 V <sub>PK</sub> (DBQ-16); Maximum surge isolation voltage, 12800 V <sub>PK</sub> (DW-16, Reinforced), 7800 V <sub>PK</sub> (DW-16, Basic) and 10000 V <sub>PK</sub> (DBQ-16)	Reinforced insulation per CSA 62368-1 and IEC 62368-1 600V <sub>RMS</sub> (DW-16) and 370 V <sub>RMS</sub> (DBQ-16) max working voltage (pollution degree 2, material group I); 2 MOPP (Means of Patient Protection) per CSA 60601-1 and IEC 60601-1, 250 V <sub>RMS</sub> (DW-16) max working voltage	DW-16: Single protection, 5000 V <sub>RMS</sub> ; DBQ-16: Single protection, 3000 V <sub>RMS</sub>	DW-16: Reinforced Insulation, Altitude ≤ 5000 m, Tropical Climate, 700 V <sub>RMS</sub> maximum working voltage; DBQ-16: Basic Insulation, Altitude ≤ 5000 m, Tropical Climate, 400 V <sub>RMS</sub> maximum working voltage	5000 V <sub>RMS</sub> (DW-16) and 3000 V <sub>RMS</sub> (DBQ-16) Reinforced insulation per EN 61010-1 up to working voltage of 600 V <sub>RMS</sub> (DW-16) and 300 V <sub>RMS</sub> (DBQ-16) 5000 V <sub>RMS</sub> (DW-16) and 3000 V <sub>RMS</sub> (DBQ-16) Reinforced insulation per EN 62368-1 up to working voltage of 600 V <sub>RMS</sub> (DW-16) and 370 V <sub>RMS</sub> (DBQ-16)

### 6.8 Safety Limiting Values

Safety limiting<sup>(1)</sup> intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the I/O can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>DW-16 PACKAGE</b>						
I <sub>S</sub>	Safety input, output, or supply current	R <sub>θJA</sub> = 83.4°C/W, V <sub>I</sub> = 5.5 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-1</a>			273	mA
		R <sub>θJA</sub> = 83.4°C/W, V <sub>I</sub> = 3.6 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-1</a>			416	
		R <sub>θJA</sub> = 83.4°C/W, V <sub>I</sub> = 2.75 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-1</a>			545	
P <sub>S</sub>	Safety input, output, or total power	R <sub>θJA</sub> = 83.4°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-3</a>			1499	mW
T <sub>S</sub>	Maximum safety temperature				150	°C
<b>DBQ-16 PACKAGE</b>						
I <sub>S</sub>	Safety input, output, or supply current	R <sub>θJA</sub> = 109°C/W, V <sub>I</sub> = 5.5 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-2</a>			209	mA
		R <sub>θJA</sub> = 109°C/W, V <sub>I</sub> = 3.6 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-2</a>			319	
		R <sub>θJA</sub> = 109°C/W, V <sub>I</sub> = 2.75 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-2</a>			417	
P <sub>S</sub>	Safety input, output, or total power	R <sub>θJA</sub> = 109°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C, see <a href="#">Figure 6-4</a>			1147	mW
T <sub>S</sub>	Maximum safety temperature				150	°C

(1) The maximum safety temperature, T<sub>S</sub>, has the same value as the maximum junction temperature, T<sub>J</sub>, specified for the device. The I<sub>S</sub> and P<sub>S</sub> parameters represent the safety current and safety power respectively. The maximum limits of I<sub>S</sub> and P<sub>S</sub> should not be exceeded. These limits vary with the ambient temperature, T<sub>A</sub>.  
The junction-to-air thermal resistance, R<sub>θJA</sub>, in the table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:  
T<sub>J</sub> = T<sub>A</sub> + R<sub>θJA</sub> × P, where P is the power dissipated in the device.  
T<sub>J(max)</sub> = T<sub>S</sub> = T<sub>A</sub> + R<sub>θJA</sub> × P<sub>S</sub>, where T<sub>J(max)</sub> is the maximum allowed junction temperature.

$P_S = I_S \times V_I$ , where  $V_I$  is the maximum input voltage.

## 6.9 Electrical Characteristics—5-V Supply

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$  (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH}$	High-level output voltage	$I_{OH} = -4\text{ mA}$ ; See <a href="#">Figure 7-1</a>	$V_{CCO} - 0.4$ <sup>(1)</sup>	4.8		V
$V_{OL}$	Low-level output voltage	$I_{OL} = 4\text{ mA}$ ; See <a href="#">Figure 7-1</a>		0.2	0.4	V
$V_{IT+(IN)}$	Rising input switching threshold			$0.6 \times V_{CCI}$	$0.7 \times V_{CCI}$	V
$V_{IT-(IN)}$	Falling input switching threshold		$0.3 \times V_{CCI}$	$0.4 \times V_{CCI}$		V
$V_{I(HYS)}$	Input threshold voltage hysteresis		$0.1 \times V_{CCI}$	$0.2 \times V_{CCI}$		V
$I_{IH}$	High-level input current	$V_{IH} = V_{CCI}$ <sup>(1)</sup> at INx			10	$\mu\text{A}$
$I_{IL}$	Low-level input current	$V_{IL} = 0\text{ V}$ at INx	-10			$\mu\text{A}$
$I_{IH}$	High-level input current	$V_{IH} = V_{CCI}$ <sup>(1)</sup> at ENx			20	$\mu\text{A}$
$I_{IL}$	Low-level input current	$V_{IL} = 0\text{ V}$ at ENx	-20			$\mu\text{A}$
CMTI	Common mode transient immunity	$V_I = V_{CCI}$ or $0\text{ V}$ , $V_{CM} = 1200\text{ V}$ ; See <a href="#">Figure 7-4</a>	85	100		$\text{kV}/\mu\text{s}$
$C_i$	Input Capacitance <sup>(2)</sup>	$V_I = V_{CC}/2 + 0.4 \times \sin(2\pi ft)$ , $f = 1\text{ MHz}$ , $V_{CC} = 5\text{ V}$		2		pF

(1)  $V_{CCI}$  = Input-side  $V_{CC}$ ;  $V_{CCO}$  = Output-side  $V_{CC}$

(2) Measured from input pin to same side ground.

### 6.10 Supply Current Characteristics—5-V Supply

$V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$  (over recommended operating conditions unless otherwise noted)

## 6.15 Switching Characteristics—5-V Supply

 $V_{CC1} = V_{CC2} = 5\text{ V} \pm 10\%$  (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
$t_{PLH}$ , $t_{PHL}$	Propagation delay time	See Figure 7-1	6	10.7	17	ns	
PWD	Pulse width distortion <sup>(1)</sup> $ t_{PHL} - t_{PLH} $		0		5.9	ns	
$t_{sk(o)}$	Channel-to-channel output skew time <sup>(2)</sup>	Same-direction channels			4	ns	
$t_{sk(pp)}$	Part-to-part skew time <sup>(3)</sup>				4.4	ns	
$t_r$	Output signal rise time	See Figure 7-1		2.4	3.9	ns	
$t_f$	Output signal fall time			2.4	3.9	ns	
$t_{PHZ}$	Disable propagation delay, high-to-high impedance output	See Figure 7-2		9	22	ns	
$t_{PLZ}$	Disable propagation delay, low-to-high impedance output			9	20	ns	
$t_{PZH}$	Enable propagation delay, high impedance-to-high output for ISO774x				7	20	ns
	Enable propagation delay, high impedance-to-high output for ISO774x with F suffix				3	8.5	$\mu\text{s}$
$t_{PZL}$	Enable propagation delay, high impedance-to-low output for ISO774x				3	8.5	$\mu\text{s}$
	Enable propagation delay, high impedance-to-low output for ISO774x with F suffix				7	20	ns
$t_{DO}$	Default output delay time from input power loss	Measured from the time $V_{CC}$ goes below 1.7V. See Figure 7-4		0.1	0.3	$\mu\text{s}$	
$t_{ie}$	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		0.8		ns	

(1) Also known as pulse skew.

(2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

## 6.16 Switching Characteristics—3.3-V Supply

$V_{CC1} = V_{CC2} = 3.3\text{ V} \pm 10\%$  (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}$ , $t_{PHL}$	Propagation delay time	See <a href="#">Figure 7-1</a>	6	11	18.5	ns
PWD	Pulse width distortion <sup>(1)</sup> $ t_{PHL} - t_{PLH} $		0.1	5.9	ns	
$t_{sk(o)}$	Channel-to-channel output skew time <sup>(2)</sup>	Same-direction channels			4.4	ns
$t_{sk(pp)}$	Part-to-part skew time <sup>(3)</sup>				5	ns
$t_r$	Output signal rise time	See <a href="#">Figure 7-1</a>		1.3	3	ns
$t_f$	Output signal fall time			1.3	3	ns
$t_{PHZ}$	Disable propagation delay, high-to-high impedance output	See <a href="#">Figure 7-2</a>		17	31	ns
$t_{PLZ}$	Disable propagation delay, low-to-high impedance output			17	30	ns
$t_{PZH}$	Enable propagation delay, high impedance-to-high output for ISO774x			17	30	ns
	Enable propagation delay, high impedance-to-high output for ISO774x with F suffix			3.2	8.5	$\mu\text{s}$
$t_{PZL}$	Enable propagation delay, high impedance-to-low output for ISO774x			3.2	8.5	$\mu\text{s}$
	Enable propagation delay, high impedance-to-low output for ISO774x with F suffix			17	30	ns
$t_{DO}$	Default output delay time from input power loss	Measured from the time $V_{CC}$ goes below 1.7V. See <a href="#">Figure 7-4</a>		0.1	0.3	$\mu\text{s}$
$t_{ie}$	Time interval error	$2^{16} - 1$ PRBS data at 100 Mbps		0.9		ns

- (1) Also known as pulse skew.
- (2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.
- (3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

## 6.17 Switching Characteristics—2.5-V Supply

 $V_{CC1} = V_{CC2} = 2.5\text{ V} \pm 10\%$  (over recommended operating conditions unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
$t_{PLH}$ , $t_{PHL}$	Propagation delay time	See <a href="#">Figure 7-1</a>	7.5	12	21	ns	
PWD	Pulse width distortion <sup>(1)</sup> $ t_{PHL} - t_{PLH} $		0.2	5.9	ns		
$t_{sk(o)}$	Channel-to-channel output skew time <sup>(2)</sup>	Same-direction channels			4.4	ns	
$t_{sk(pp)}$	Part-to-part skew time <sup>(3)</sup>				5.3	ns

$t_f$	Output signal fall time			1	3.5	ns	
$t_{PHZ}$	Disable propagation delay, high-to-high impedance output	See <a href="#">Figure 7-2</a>		22	41	ns	
$t_{PLZ}$	Disable propagation delay, low-to-high impedance output			22	40	ns	
$t_{PZH}$	Enable propagation delay, high impedance-to-high output for ISO774x			18	40	ns	
	Enable propagation delay, high impedance-to-high output for ISO774x with F suffix			3.3	8.5	$\mu\text{s}$	
$t_{PZL}$	Enable propagation delay, high impedance-to-low output for ISO774x			3.3	8.5	$\mu\text{s}$	
	Enable propagation delay, high impedance-to-low output for ISO774x with F suffix			18	40	ns	
$t_{DO}$	Default output delay time from input power loss		Measured from the time $V_{CC}$ goes below 1.7V. See <a href="#">Figure 7-4</a>		0.1	0.3	$\mu\text{s}$
$t_{ie}$	Time interval error		$2^{16} - 1$ PRBS data at 100 Mbps		0.7		ns

(1) Also known as pulse skew.

(2)  $t_{sk(o)}$  is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3)  $t_{sk(pp)}$  is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

## 8 Detailed Description

### 8.1 Overview

The ISO774x family of devices uses an ON-OFF keying (OOK) modulation scheme to transmit the digital data across a silicon dioxide based isolation barrier. The transmitter sends a high frequency carrier across the barrier to represent one digital state and sends no signal to represent the other digital state. The receiver demodulates the signal after advanced signal conditioning and produces the output through a buffer stage. If the ENx pin is low then the output goes to high impedance. The ISO774x devices also incorporate advanced circuit techniques to maximize the CMTI performance and minimize the radiated emissions due to the high frequency carrier and IO buffer switching. The conceptual block diagram of a digital capacitive isolator, [Figure 8-1](#), shows a functional block diagram of a typical channel.

### 8.2 Functional Block Diagram

				DBQ-16	3000 V <sub>RMS</sub> / 4242 V <sub>PK</sub>

### 8.3.1 Electromagnetic Compatibility (EMC) Considerations

Many applications in harsh industrial environment are sensitive to disturbances such as electrostatic discharge (ESD), electrical fast transient (EFT), surge and electromagnetic emissions. These electromagnetic disturbances are regulated by international standards such as IEC 61000-4-x and CISPR 22. Although system-level performance and reliability depends, to a large extent, on the application board design and layout, the ISO774x family of devices incorporates many chip-level design improvements for overall system robustness. Some of these improvements include:

- Robust ESD protection cells for input and output signal pins and inter-chip bond pads.
- Low-resistance connectivity of ESD cells to supply and ground pins.
- Enhanced performance of high voltage isolation capacitor for better tolerance of ESD, EFT and surge events.
- Bigger on-chip decoupling capacitors to bypass undesirable high energy signals through a low impedance path.
- PMOS and NMOS devices isolated from each other by using guard rings to avoid triggering of parasitic SCRs.
- Reduced common mode currents across the isolation barrier by ensuring purely differential internal operation.

## 8.4 Device Functional Modes

Table 8-2 lists the functional modes for the ISO774x devices.

**Table 8-2. Function Table**

$V_{CCI}$	$V_{CCO}$	INPUT (INx) <sup>(2)</sup>	OUTPUT ENABLE (ENx)	OUTPUT (OUTx)	COMMENTS
PU	PU	H	H or open	H	Normal Operation: A channel output assumes the logic state of its input.
		L	H or open	L	
		Open	H or open	Default	Default mode: When INx is open, the corresponding channel output goes to its default logic state. Default is <i>High</i> for ISO774x and <i>Low</i> for ISO774x with F suffix.
X	PU	X	L	Z	A low value of output enable causes the outputs to be high-impedance.
PD	PU	X	H or open	Default	Default mode: When $V_{CCI}$ is unpowered, a channel output assumes the logic state based on the selected default option. Default is <i>High</i> for ISO774x and <i>Low</i> for ISO774x with F suffix. When $V_{CCI}$ transitions from unpowered to powered-up, a channel output assumes the logic state of the input. When $V_{CCI}$ transitions from powered-up to unpowered, channel output assumes the selected default state.
X	PD	X	X	Undetermined	When $V_{CCO}$ is unpowered, a channel output is undetermined <sup>(1)</sup> . When $V_{CCO}$ transitions from unpowered to powered-up, a channel output assumes the logic state of the input.

(1) The outputs are in undetermined state when  $1.7\text{ V} < V_{CCI}$ ,  $V_{CCO} < 2.25\text{ V}$ .

(2) A strongly driven input signal can weakly power the floating  $V_{CC}$  through an internal protection diode and cause undetermined output.

## 9 Application and Implementation

### Note

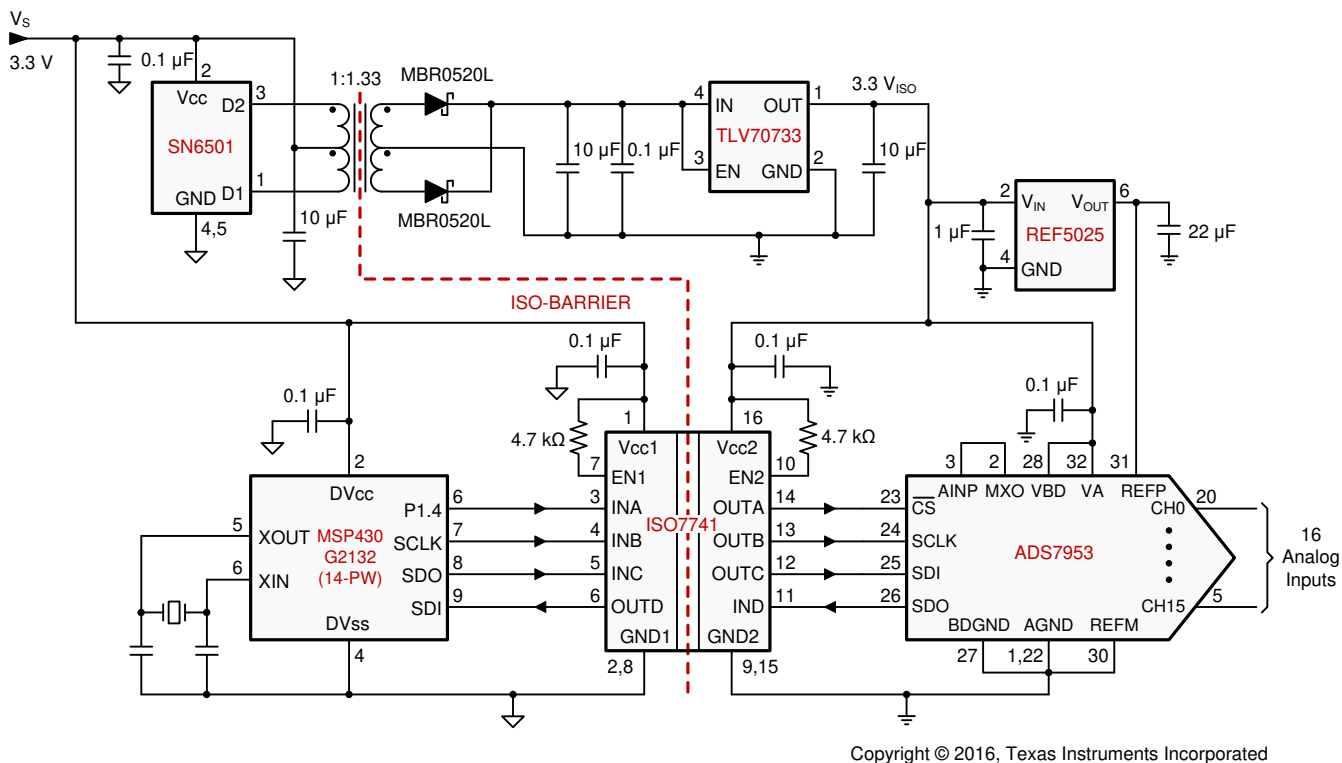

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The ISO774x devices are high-performance, quad-channel digital isolators. These devices come with enable pins on each side which can be used to put the respective outputs in high impedance for multi master driving applications and reduce power consumption. The ISO774x devices use single-ended CMOS-logic switching technology. The voltage range is from 2.25 V to 5.5 V for both supplies,  $V_{CC1}$  and  $V_{CC2}$ . When designing with digital isolators, keep in mind that because of the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is,  $\mu\text{C}$  or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

### 9.2 Typical Application

Figure 9-1 shows the isolated serial peripheral interface (SPI).

Copyright © 2016, Texas Instruments Incorporated

Figure 9-1. Isolated SPI for an Analog Input Module With 16 Input

### 9.2.1 Design Requirements

To design with these devices, use the parameters listed in [Table 9-1](#).

**Table 9-1. Design Parameters**

PARAMETER	VALUE
Supply voltage, $V_{CC1}$ and $V_{CC2}$	2.25 to 5.5 V
Decoupling capacitor between $V_{CC1}$ and GND1	0.1 $\mu\text{F}$
Decoupling capacitor from $V_{CC2}$ and GND2	0.1 $\mu\text{F}$

### 9.2.2 Detailed Design Procedure

Unlike optocouplers, which require external components to improve performance, provide bias, or limit current, the ISO774x family of devices only require two external bypass capacitors to operate.

**Figure 9-2. Typical ISO774x Circuit Hook-up**

The DWW package provides wider creepage and clearance without the need for two isolators in series or an extra isolated power supply, saving design cost and board space. For more details, please refer to the technical document [How to Meet the Higher Isolation Creepage & Clearance Needs in Automotive Applications](#).

### 9.2.3 Application Curve

The following typical eye diagrams of the ISO774x family of devices indicates low jitter and wide open eye at the maximum data rate of 100 Mbps.

#### 9.2.3.1 Insulation Lifetime

Insulation lifetime projection data is collected by using industry-standard Time Dependent Dielectric Breakdown (TDDB) test method. In this test, all pins on each side of the barrier are tied together creating a two-terminal device and high voltage applied between the two sides; See [Figure 9-6](#) for TDDB test setup. The insulation breakdown data is collected at various high voltages switching at 60 Hz over temperature. For reinforced insulation, VDE standard requires the use of TDDB projection line with failure rate of less than 1 part per million (ppm). Even though the expected minimum insulation lifetime is 20 years at the specified working isolation voltage, VDE reinforced certification requires additional safety margin of 20% for working voltage and 50% for lifetime which translates into minimum required insulation lifetime of 30 years at a working voltage that's 20% higher than the specified value.

[Figure 9-7](#) shows the intrinsic capability of the isolation barrier to withstand high voltage stress over its lifetime. Based on the TDDB data, the intrinsic capability of the insulation is 1500 V<sub>RMS</sub> with a lifetime of 36 years. Other factors, such as package size, pollution degree, material group, etc. can further limit the working voltage of the component. The working voltage of DW-16 package is specified upto 1500 V<sub>RMS</sub>. At the lower working voltages, the corresponding insulation lifetime is much longer than 36 years. DBQ-16 package at 400 V<sub>RMS</sub> working voltage has a much longer lifetime than DW-16 package.

Figure 9-6. Test Setup for Insulation Lifetime Measurement

Figure 9-7. Insulation Lifetime Projection Data

## 10 Power Supply Recommendations

To help ensure reliable operation at data rates and supply voltages, a 0.1- $\mu$ F bypass capacitor is recommended at the input and output supply pins ( $V_{CC1}$  and  $V_{CC2}$ ). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as Texas Instruments' [SN6501](#) or [SN6505A](#). For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501 Transformer Driver for Isolated Power Supplies data sheet](#) or [SN6505A Low-Noise 1-A Transformer Drivers for Isolated Power Supplies data sheet](#).

## 11 Layout

### 11.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 11-1](#)). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100 pF/inch<sup>2</sup>.
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, refer to the [Digital Isolator Design Guide](#).

#### 11.1.1 PCB Material

For digital circuit boards operating below 150 Mbps, (or rise and fall times higher than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 UL94V-0 printed circuit boards. This PCB is preferred over cheaper alternatives due to its lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and self-extinguishing flammability-characteristics.

### 11.2 Layout Example

## 13 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision H (March 2023) to Revision I (January 2024)</b>	<b>Page</b>
• Updated Features list.....	1
• Updated numbering format for tables, figures and cross-references throughout document.....	1
• Updated Thermal Characteristics, Safety Limiting Values, and Thermal Derating Curves to provide more accurate system-level thermal calculations.....	7
• Updated electrical and switching characteristics to match device performance.....	7

<b>Changes from Revision G (February 2020) to Revision H (March 2023)</b>	<b>Page</b>
• Changed standard name from "DIN V VDE V 0884-11:2017-01" to "DIN EN IEC 60747-17 (VDE 0884-17)" throughout the document.....	1
• Changed "CSA, CQC, and TUV certifications" to "IEC 61010-1, IEC 62368-1, IEC 60601-1, and GB 4943.1 certifications".....	1
• Removed standard revision and year references from all standard names throughout the document .....	1
• Added Maximum impulse voltage ( $V_{IMP}$ ) specification per DIN EN IEC 60747-17 (VDE 0884-17) .....	10
• Changed test conditions and values of Maximum surge isolation voltage ( $V_{IOSM}$ ) specification per DIN EN IEC 60747-17 (VDE 0884-17) .....	10
• Clarified method b test conditions of Apparent charge ( $q_{PD}$ ) .....	10
• Removed references to standard IEC/EN/CSA 60950-1 throughout the document .....	12

<b>Changes from Revision F (May 2019) to Revision G (February 2020)</b>	<b>Page</b>
• Added ISO7741B device to the data sheet for applications that require basic insulation only.....	1
• Combined CSA, CQC, and TUV <a href="#">Section 1</a> bullets into a single bullet .....	1
• Deleted "All certifications complete" bullet in <a href="#">Section 1</a> .....	1

<b>Changes from Revision E (January 2018) to Revision F (May 2019)</b>	<b>Page</b>
• Made editorial and cosmetic changes throughout the document .....	1
• Changed From: "Isolation Barrier Life: >40 Years" To: ">100-year projected lifetime at 1500 V <sub>RMS</sub> working voltage" in <a href="#">Section 1</a> .....	1
• Added "Up to 5000 V <sub>RMS</sub> isolation rating" in <a href="#">Section 1</a> .....	1
• Added "Up to 12.8 kV surge capability" in <a href="#">Section 1</a> .....	1
• Added "±8 kV IEC 61000-4-2 contact discharge protection across isolation barrier" in <a href="#">Section 1</a> .....	1
• Added "Automotive version available: <i>ISO774x-Q1</i> " in <a href="#">Section 1</a> .....	1
• Changed From: "All Certifications Complete except CQC Approval of DBQ-16 Package Devices" To: "All certifications complete" in <a href="#">Section 1</a> .....	1
• Updated <a href="#">Figure 3-1</a> to show two isolation capacitors in series per channel instead of a single isolation capacitor.....	1
• Switched the line colors for V <sub>CC</sub> at 2.5 V and V <sub>CC</sub> at 3.3 V in <a href="#">Figure 6-12</a> .....	24
• Added 'How to use isolation to improve ESD, EFT, and Surge immunity in industrial systems' application report to <a href="#">Section 12.1</a> section.....	37

<b>Changes from Revision D (May 2017) to Revision E (January 2018)</b>	<b>Page</b>
• Changed the DIN certification number and certification status throughout the document.....	1
• Changed the isolation rating of the DBQ package from 2500 V <sub>RMS</sub> to 3000 V <sub>RMS</sub> .....	1
• Switched the labels for V <sub>CC1</sub> falling and V <sub>CC2</sub> rising in the graph legend of <i>Power Supply Undervoltage Threshold vs Free-Air Temperature</i> .....	24

<b>Changes from Revision C (December 2016) to Revision D (May 2017)</b>	<b>Page</b>
• Updated Safety-Related Certifications table.....	12
• Changed minimum CMTI from 40 to 85 in all Electrical Characteristics tables.....	14

<b>Changes from Revision B (October 2016) to Revision C (December 2016)</b>	<b>Page</b>
• Updated the numbering format for tables, figures, and cross-references throughout document.....	1
• Changed "Regulatory Information" table to "Safety-Related Certifications and updated certifications from "planned" to "certified" .....	12

<b>Changes from Revision A (June 2016) to Revision B (October 2016)</b>	<b>Page</b>
• Changed <i>Feature</i> From: High CMTI: ±75 kV/μs Typical To: High CMTI: ±100 kV/μs Typical.....	1
• Changed <i>Feature</i> From: All Certifications are Planned To: 'VDE, UL, and TUV Certifications for DW Package Complete; All Other Certifications are Planned.....	1
• Switched the labels for V <sub>CC1</sub> falling and V <sub>CC2</sub> rising in the graph legend of <i>Power Supply Undervoltage Threshold vs Free-Air Temperature</i> .....	24
• Added Note B to <a href="#">Figure 7-3</a> .....	26
• Changed the <a href="#">Section 9.2.1</a> paragraph .....	33
• Replaced the <a href="#">Section 10</a> section .....	35

---

<b>Changes from Revision * (March 2016) to Revision A (June 2016)</b>	<b>Page</b>
• Changed the device status From: Preview To: Production.....	<b>1</b>

---

## **14 Mechanical, Packaging, and Orderable Information**

The following pages include mechanical packaging and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF ISO7740, ISO7741, ISO7742 :**

- Automotive : [ISO7740-Q1](#), [ISO7741-Q1](#), [ISO7742-Q1](#)

NOTE: Qualified Version Definitions:

- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

## SOIC - 2.65 mm max height

SOIC

### NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.
5. Reference JEDEC registration MS-013.
