

TPS22990 5.5-V, 10-A, 3.9-mΩ On-Resistance Load Switch

1 Features

- Integrated Single Channel Load Switch
- VBIAS Voltage Range: 2.5 V to 5.5 V
- VIN Voltage Range: 0.6 V to V_{BIAS}
- On-Resistance
 - $R_{ON} = 3.9\text{ m}\Omega$ (typical) at $V_{IN} = 5\text{ V}$ ($V_{BIAS} = 5\text{ V}$)
 - $R_{ON} = 3.9\text{ m}\Omega$ (typical) at $V_{IN} = 3.3\text{ V}$ ($V_{BIAS} = 3.3\text{ V}$)
- 10-A Maximum Continuous Switch Current
- Quiescent Current
 - $I_{Q,VBIAS} = 63\text{ }\mu\text{A}$ at $V_{BIAS} = 5\text{ V}$
- Shutdown Current
 - $I_{SD,VBIAS} = 5.5\text{ }\mu\text{A}$ at $V_{BIAS} = 5\text{ V}$
 - $I_{SD,VIN} = 4\text{ nA}$ at $V_{BIAS} = 5\text{ V}$, $V_{IN} = 5\text{ V}$
- Controlled and Adjustable Slew Rate through CT
- Power Good (PG) Indicator
- Quick Output Discharge (QOD) (TPS22990 Only)
- 3-mm x 2-mm SON 10-pin Package with Thermal Pad
- ESD Performance Tested per JESD 22
 - 2-kV HBM and 1-kV CDM

2 Applications

- Notebooks, Chromebooks and Tablets
- Desktop PC and Industrial PC
- Solid State Drives (SSDs)
- Servers
- Telecom systems

3 Description

The TPS22990 product family consists of two devices: TPS22990 and TPS22990N. Each device is a 3.9-mΩ, single-channel load switch with a controlled and adjustable turn on and integrated PG indicator.

The devices contain an N-channel MOSFET that can operate over an input voltage range of 0.6 V to 5.5 V and can support a maximum continuous current of 10 A. The wide input voltage range and high current capability enable the devices to be used across multiple designs and end equipments. 3.9-mΩ On-resistance minimizes the voltage drop across the load switch and power loss from the load switch.

The controlled rise time for the device greatly reduces inrush current caused by large bulk load capacitances, thereby reducing or eliminating power supply droop. The adjustable slew rate through CT provides the design flexibility to trade off inrush current and power up timing requirements. Integrated PG indicator notifies the system about the status of the load switch to facilitate seamless power sequencing.

The TPS22990 has an optional 218-Ω On-chip resistor for quick discharge of the output when switch is disabled to avoid any unknown state caused by floating supply to the downstream load.

The TPS22990 is available in a small, space-saving 3-mm x 2-mm 10-SON package with integrated thermal pad allowing for high power dissipation. The device is characterized for operation over the free-air temperature range of -40°C to $+105^{\circ}\text{C}$.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS22990 TPS22990N	WSON (10)	3.00 mm x 2.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Typical Application

On-Resistance vs Input Voltage

$V_{BIAS} = 5\text{ V}$, $I_{OUT} = -200\text{ mA}$

4 Revision History

Changes from Revision B (September 2016) to Revision C	Page
• Updated V_{IH} in <i>Recommended Operating Conditions</i>	4

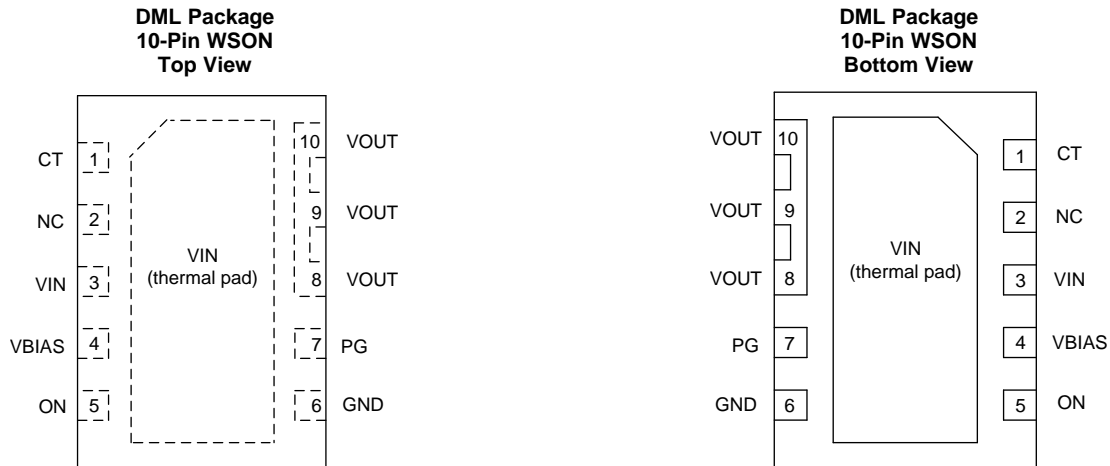

Changes from Revision A (July 2016) to Revision B	Page
• Removed the status column from <i>Device Comparison Table</i>	3
• Added the comment “(TPS22990 Only)” to the “ R_{PD} ” cell in both <i>Electrical Characteristics</i> tables	7

Changes from Original (May 2016) to Revision A	Page
• Changed device status from <i>Product Preview</i> to <i>Production Data</i>	1

5 Device Comparison Table

DEVICE	R_{ON} at $V_{BIAS} = 5\text{ V}$	QOD	I_{MAX}	ENABLE
TPS22990	3.9 m Ω	Yes	10 A	Active high
TPS22990N	3.9 m Ω	No	10 A	Active high

6 Pin Configuration and Functions

Pin Functions

PIN		TYPE	DESCRIPTION
NO.	NAME		
1	CT	O	VOUT slew rate control
2	NC	—	Not internally connected
3	VIN	I	Switch input. Bypass this input with a ceramic capacitor to GND
4	VBIAS	P	Bias voltage. Power supply to the device
5	ON	I	Active high switch control input. Do not leave floating
6	GND	GND	Device ground
7	PG	O	Power good. Active high, open drain output. Tie to GND if not used
8	VOUT	O	Switch output
9			
10			
—	VIN (Thermal Pad)	I	Switch input. VIN and thermal pad (exposed center pad) to alleviate thermal stress. See the Layout section for layout guidelines

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{IN}	Input voltage	-0.3	6	V
V _{BIAS}	Bias voltage	-0.3	6	V
V _{OUT}	Output voltage	-0.3	6	V
V _{ON}	ON voltage	-0.3	6	V
V _{PG}	PG voltage	-0.3	6	V
V _{CT}	CT voltage	-0.3	15	V
I _{MAX}	Maximum continuous switch current at T _J = 125°C		10	A
I _{PLS}	Maximum pulsed switch current, pulse < 300 μs, 2% duty cycle		12	A
T _J	Maximum junction temperature		125	°C
T _{LEAD}	Maximum lead temperature (10-s soldering time)		300	°C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V _{IN}	Input voltage		0.6	V _{BIAS}	V
V _{BIAS}	Bias voltage		2.5	5.5	V
V _{OUT}	Output voltage			V _{IN}	V
V _{ON}	ON voltage		0	5.5	V
V _{PG}	PG voltage		0	5.5	V
V _{IH, ON}	High-level input voltage, ON	V _{BIAS} = 2.5 V to 5 V, T _A < 85°C	1.05	5.5	V
		V _{BIAS} = 2.5 V to 5.5 V, T _A < 105°C	1.2	5.5	
V _{IL, ON}	Low-level input voltage, ON		0	0.5	V
C _{IN}	Input capacitor		1 ⁽¹⁾		μF
T _A	Operating free-air temperature		-40	105	°C

- (1) See the [Application Information](#) section.

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS22990	
		DML (WSON)	
		10 PINS	
			UNIT
$R_{\theta JA}$	Junction-to-ambient thermal resistance	51.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	65	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	17	°C/W
ψ_{JT}	Junction-to-top characterization parameter	2.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	17	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	3.7	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.5 Electrical Characteristics— $V_{BIAS} = 5\text{ V}$

Unless otherwise noted, the specification in the following table applies over the operating ambient temp $-40^{\circ}\text{C} \leq T_A \leq +105^{\circ}\text{C}$ (full) and $V_{BIAS} = 5\text{ V}$. Typical values are for $T_A = 25^{\circ}\text{C}$ (unless otherwise noted).

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
POWER SUPPLIES AND CURRENTS							
I_Q, V_{BIAS}	V_{BIAS} quiescent current	$I_{OUT} = 0\text{ A}$, $V_{IN} = V_{ON} = 5\text{ V}$	-40°C to $+85^{\circ}\text{C}$		63	76	μA
			-40°C to $+105^{\circ}\text{C}$			77	
I_{SD}, V_{BIAS}	V_{BIAS} shutdown current	$V_{ON} = 0\text{ V}$, $V_{OUT} = 0\text{ V}$	-40°C to $+85^{\circ}\text{C}$		5.5	7	μA
			-40°C to $+105^{\circ}\text{C}$			7	
I_{SD}, V_{IN}	V_{IN} shutdown current	$V_{ON} = 0\text{ V}$, $V_{OUT} = 0\text{ V}$	$V_{IN} = 5\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.004	4	μA
				-40°C to $+105^{\circ}\text{C}$		10	
			$V_{IN} = 3.3\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.003	3	
				-40°C to $+105^{\circ}\text{C}$		7	
			$V_{IN} = 2.5\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.002	2	
				-40°C to $+105^{\circ}\text{C}$		5	
			$V_{IN} = 1.8\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.002	2	
				-40°C to $+105^{\circ}\text{C}$		4	
	$V_{IN} = 1.05\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.001	1			
		-40°C to $+105^{\circ}\text{C}$		3			
	$V_{IN} = 0.6\text{ V}$	-40°C to $+85^{\circ}\text{C}$	0.001	1			
		-40°C to $+105^{\circ}\text{C}$		2			
I_{ON}	ON pin input leakage current	$V_{ON} = 5.5\text{ V}$	-40°C to $+105^{\circ}\text{C}$			0.1	μA
$V_{HYS,ON}$	ON pin hysteresis	$V_{IN} = 5\text{ V}$	25°C		123		mV
$I_{PG, LKG}$	Leakage current into PG pin	$V_{PG} = 5\text{ V}$	-40°C to $+105^{\circ}\text{C}$			0.5	μA
$V_{PG,OL}$	PG output low voltage	$V_{ON} = 0\text{ V}$, $I_{PG} = 1\text{ mA}$	-40°C to $+105^{\circ}\text{C}$			0.2	V
RESISTANCE CHARACTERISTICS							

Electrical Characteristics— $V_{BIAS} = 5\text{ V}$ (continued)

Unless otherwise noted, the specification in the following table applies over the operating ambient temp $-40^{\circ}\text{C} \leq T_A \leq +105^{\circ}\text{C}$ (full) and $V_{BIAS} = 5\text{ V}$. Typical values are for $T_A = 25^{\circ}\text{C}$ (unless otherwise noted).

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
R_{ON}	On-state resistance	$I_{OUT} = -200\text{ mA}$, $V_{ON} = 5\text{ V}$	$V_{IN} = 5\text{ V}$	25°C	3.9	4.8	mΩ
				-40°C to +85°C	5.7

$t_{PG,OFF}$	PG turnoff time	$R_L = 10\ \Omega$, $C_L = 0.1\ \mu\text{F}$, $C_T = 0\ \text{pF}$, $R_{PU} = 10\ \text{k}\Omega$, $C_{IN} = 1\ \mu\text{F}$		1.3	

(1) Turnoff time and fall time are dependent on the time constant at the load. For TPS22990N, there is no QOD. The time constant is $R_L \times C_L$. For TPS22990, internal pull down R_{PD} is enabled when the switch is disabled. The time constant is $(R_{PD}/R_L) \times C_L$.

Switching Characteristics (continued)

Figure 35. Timing Waveforms

9 Detailed Description

9.1 Overview

The TPS22990 device is a single channel load switch with a controlled adjustable turnon and integrated PG indicator. The device contains an N-channel MOSFET that can operate over an input voltage range of 0.6 V to 5.5 V and can support a maximum continuous current of 10 A. The wide input voltage range and high current capability enable the devices to be used across multiple designs and end equipment. 3.9-mΩ On-resistance minimizes the voltage drop across the load switch and power loss from the load switch.

The controlled rise time for the device greatly reduces inrush current caused by large bulk load capacitances, thereby reducing or eliminating power supply droop. The adjustable slew rate through CT provides the design flexibility to trade off the inrush current and power up timing requirements. Integrated PG indicator notifies the system about the status of the load switch to facilitate seamless power sequencing.

During shutdown, the device has very low leakage current, thereby reducing unnecessary leakages for downstream modules during standby. The TPS22990 has an optional 218-Ω On-chip resistor for quick discharge of the output when switch is disabled.

9.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

9.3 Feature Description

9.3.1 On and Off Control

The ON pin controls the state of the load switch. Asserting the pin high enables the switch. The minimum voltage that guarantees logic high is 1.2 V. This pin cannot be left floating and must be tied either high or low for proper functionality.

Feature Description (continued)

9.3.2 Adjustable Rise Time

The TPS22990 has controlled rise time for inrush current control. A capacitor to GND on the CT pin adjusts the rise time. Without any capacitor on the CT, the rise time is at its minimum for fastest timing. The voltage on the CT pin can be as high as 15 V; therefore the minimum voltage rating for the CT capacitor must be 25 V for optimal performance. An approximate equation for the relationship between C_T , V_{IN} and rise time when V_{BIAS} is set to 5 V is shown in Equation 1. As shown in Figure 35, rise time is defined as from 10% to 90% measurement on V_{OUT} .

$$t_R = (0.011 \times V_{IN} + 0.002) \times C_T + 4.7 \times V_{IN} + 7.8$$

where

- t_R is the rise time (in μs)
 - V_{IN} is the input voltage (in V)
 - C_T is the capacitance value on the CT pin (in pF)
- (1)

Table 1 contains rise time values measured on a typical device. Rise times shown below are only valid for the power-up sequence where V_{IN} and V_{BIAS} are already in steady state condition before the ON pin is asserted high.

Table 1. Rise Time vs CT Capacitor

C_T (pF)	Rise Time (μs) at 25°C $C_L = 0.1 \mu\text{F}$, $C_{IN} = 1 \mu\text{F}$, $R_L = 10 \Omega$, $V_{BIAS} = 5 \text{ V}$				
	$V_{IN} = 5 \text{ V}$	$V_{IN} = 3.3 \text{ V}$	$V_{IN} = 1.8 \text{ V}$	$V_{IN} = 1.05 \text{ V}$	$V_{IN} = 0.6 \text{ V}$
0	30.5	24.8	17.5	12.6	9.5

10000	598.5	404.8	233.2	146.9	98.6

9.3.3 Power Good (PG)

The TPS22990 has a power good (PG) output signal to indicate the gate of the pass FET is driven high and the switch is on with the On-resistance close to its final value (full load ready). The signal is an active high and open drain output which can be connected to a voltage source through an external pull up resistor, R_{PU} . This voltage source can be V_{OUT} from the TPS22990 or another external voltage. V_{BIAS} is required for PG to have a valid output. Equation 2 below shows the approximate equation for the relationship between C_T , V_{IN} and PG turnon time ($t_{PG,ON}$) when V_{BIAS} is set to 5 V.

$$t_{PG,ON} = (0.013 * V_{IN} + 0.04) * C_T + 4.7 * V_{IN} + 129$$

where

- $t_{PG,ON}$ is the PG turnon time (in μs)
 - V_{IN} is the input voltage (in V)
 - C_T is the capacitance value on the CT pin (in pF)
- (2)

Table 2 contains PG turnon time values measured on a typical device.

Table 2. PG Turnon Time vs CT Capacitor

C _T (pF)	Typical PG turnon time (us) at 25°C C _L = 0.1 uF, C _{IN} = 1 uF, R _L = 10 Ω, V _{BIAS} = 5 V, R _{PU} = 10 kΩ				
	V _{IN} = 5 V	V _{IN} = 3.3 V	V _{IN} = 1.8 V	V _{IN} = 1.05 V	V _{IN} = 0.6 V

4700	636.4	525.6	429.8	382.7	353.3
10000	1239	999.8	792.4	689.4	627.4

9.3.4 Quick Output Discharge (QOD) (TPS22990 Only)

The TPS22990 family includes an optional QOD feature. When the switch is disabled, a discharge resistor is connected between V_{OUT} and GND. This resistor has a typical value of 218 Ω and prevents the output from floating while the switch is disabled.

9.4 Device Functional Modes

Table 3 shows the function table for TPS22990.

Table 3. Function Table

ON	V _{IN} to V _{OUT}	OUTPUT DISCHARGE ⁽¹⁾
L	OFF	ENABLED
H	ON	DISABLED

(1) This feature is in the TPS22990 only (not in TPS22990N).

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

10.1.1 Input to Output Voltage Drop

The input to output voltage drop in the device is determined by the R_{ON} of the device and the load current. The R_{ON} of the device depends upon the V_{IN} and V_{BIAS} condition of the device. See the R_{ON} specification in the [Electrical Characteristics— \$V_{BIAS} = 5\text{ V}\$](#) table of this datasheet. Once the R_{ON} of the device is determined based upon the V_{IN} and V_{BIAS} conditions, use [Equation 3](#) to calculate the input to output voltage drop.

$$\Delta V = I_{LOAD} \times R_{ON}$$

where

- ΔV is the voltage drop from V_{IN} to V_{OUT}
- I_{LOAD} is the load current
- R_{ON} is the on-resistance of the device for a specific V_{IN} and V_{BIAS}
- An appropriate I_{LOAD} must be chosen such that the I_{MAX} specification of the device is not violated (3)

10.1.2 Input Capacitor

It is recommended to use a capacitor between V_{IN} and GND close to the device pins. This helps limit the voltage drop on the input supply caused by transient inrush currents when the switch is turned on into a discharged capacitor at the load. A 1- μF ceramic capacitor, C_{IN} , is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop. A C_{IN} to C_L ratio of 10 to 1 is recommended for minimizing V_{IN} dip caused by inrush currents during startup, where C_L is the load capacitance.

10.1.3 Thermal Consideration

The maximum junction temperature should be limited to below 125°C. Use [Equation 4](#) to calculate the maximum allowable dissipation, $P_{D(max)}$ for a given output load current and ambient temperature. $R_{\theta JA}$ is highly dependent upon board layout.

$$P_{D(max)} = \frac{T_{J(max)} - T_A}{R_{\theta JA}}$$

where

- $P_{D(max)}$ is the maximum allowable power dissipation
- $T_{J(max)}$ is the maximum allowable junction temperature
- T_A is the ambient temperature
- $R_{\theta JA}$ is the junction-to-air thermal impedance (4)

10.1.4 PG Pull Up Resistor

The PG output is an open drain signal which connects to a voltage source through a pull up resistor R_{PU} . The PG signal can be used to drive the enable pins of downstream devices, EN. PG is active high, and its voltage is given by [Equation 5](#).

Application Information (continued)

$$V_{PG} = V_{OUT} - (I_{PG,LK} + I_{EN,LK}) \times R_{PU}$$

where

- V_{OUT} is the voltage where PG is tied to
- $I_{PG,LK}$ is the leakage current into PG pin
- $I_{EN,LK}$ is the leakage current into the EN pin driven by PG
- R_{PU} is the pull up resistance

(5)

V_{PG} needs to be higher than $V_{IH, MIN}$ of the EN pin to be treated as logic high. The maximum R_{PU} is determined by [Equation 6](#).

$$R_{PU,MAX} = \frac{V_{OUT} - V_{IH,MIN}}{I_{PG,LK} + I_{EN,LK}}$$

(6)

When PG is disabled, with 1 mA current into PG pin ($I_{PG} = 1 \text{ mA}$), $V_{PG,OL}$ is less than 0.2 V and treated as logic low as long as $V_{IL,MAX}$ of the EN pin is greater than 0.2 V. The minimum R_{PU} is determined by [Equation 7](#).

$$R_{PU,MIN} = \frac{V_{OUT}}{I_{PG} + I_{EN,LK}}$$

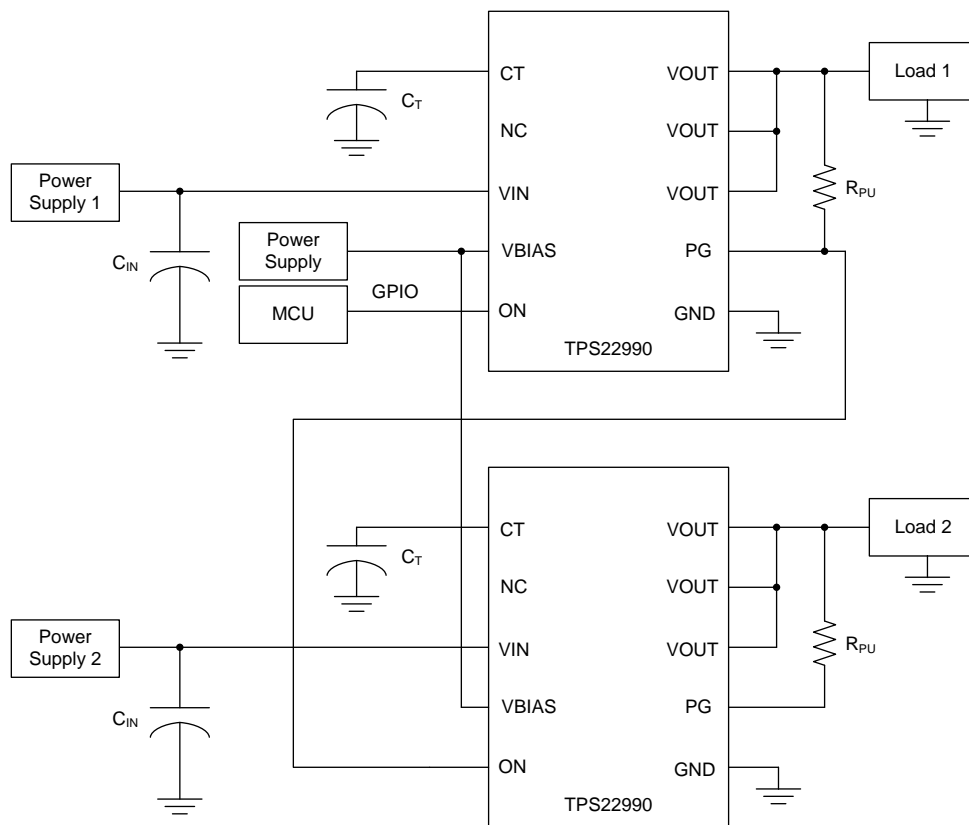

(7)

R_{PU} can be chosen within the range defined by $R_{PU,MIN}$ and $R_{PU,MAX}$. $R_{PU} = 10 \text{ k}\Omega$ is used for characterization.

10.1.5 Power Sequencing

The TPS22990 has an integrated power good indicator which can be used for power sequencing. As shown in [Figure 36](#), the switch to the second load is controlled by the PG signal from the first switch. This ensures that the power to load 2 is only enabled after the power to load 1 is enabled and the first switch is full load ready.

Application Information (continued)

Copyright © 2016, Texas Instruments Incorporated

Figure 36. Power Sequencing

10.1.6 Standby Power Reduction

Any end equipment that is being powered from a battery has a need to reduce current consumption in order to maintain the battery charge for a longer time. The TPS22990 devices help to accomplish this reduction by turning off the supply to the downstream modules that are in standby state and significantly reduce the leakage current overhead of the standby modules as shown in Figure 37.

Application Information (continued)

Figure 37. Standby Power Reduction
10.2 Typical Application

Figure 38 demonstrates how to use TPS22990 to limit inrush current to output capacitance.

Figure 38. Powering a Downstream Module

Typical Application (continued)

10.2.1 Design Requirements

For this design example, use the input parameters shown in [Table 4](#).

Table 4. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
V_{BIAS}	3.3 V
V_{IN}	1.05 V
C_L	10 μ F
R_L	None
Maximum acceptable inrush current	100 mA

10.2.2 Detailed Design Procedure

10.2.2.1 Managing Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to V_{IN} . This charge arrives in the form of inrush current. Inrush current can be calculated using [Equation 8](#).

$$I_{INRUSH} = C_L \times \frac{dV}{dt} \approx C_L \times \frac{0.8 \times V_{IN}}{t_R}$$

where

- I_{INRUSH} is the Inrush current
 - C_L is the Load capacitance
 - dV/dt is the Output slew rate
 - V_{IN} is the Input voltage
 - t_R is the rise time
- (8)

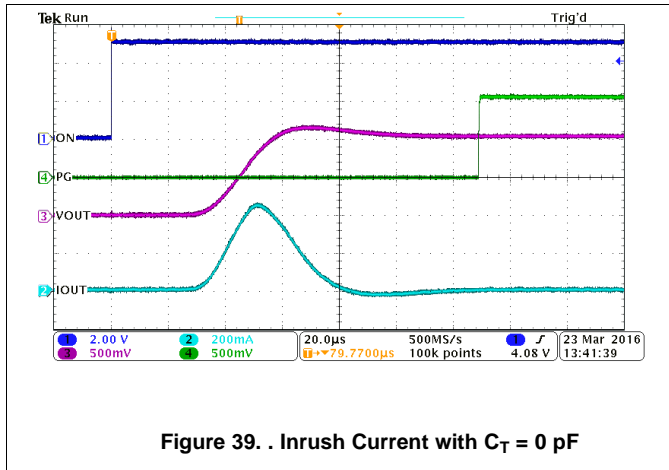

Minimum acceptable rise time can be calculated using the design requirements and the inrush current equation. See [Equation 9](#).

$$t_R = \frac{0.8 \times V_{IN} \times C_L}{I_{INRUSH}} = 84 \mu\text{s}$$

(9)

The TPS22990 has very fast timing without a CT capacitor (C_T). The typical rise time is 12 μ s at $V_{BIAS} = 3.3$ V, $V_{IN} = 1.05$ V, $R_L = 10$ Ω , and $C_L = 0.1$ μ F. As shown in [Figure 39](#), the rise time is much smaller than 84 μ s and the inrush current is 460 mA without C_T . The C_T for the required rise time must be calculated using [Equation 1](#). For 84 μ s, the calculated $C_T = 5259$ pF. [Figure 40](#) shows the inrush current is less than 100 mA with $C_T = 6800$ pF.

10.2.3 Application Curves

11 Power Supply Recommendations

The device is designed to operate with a V_{BIAS} range of 2.5 V to 5.5 V, and a V_{IN} range of 0.6 V to V_{BIAS} . The supply must be well regulated and placed as close to the device terminal as possible with the recommended 1- μ F bypass capacitor. If the supply is located more than a few inches from the device terminals, additional bulk capacitance may be required in addition to the ceramic bypass capacitors. In the case where the power supply is slow to respond to a large load current step, additional bulk may also be required. If additional bulk capacitance is required, an electrolytic, tantalum, or ceramic capacitor of 10 μ F may be sufficient.

12 Layout

12.1 Layout Guidelines

For best performance, all traces must be as short as possible. To be most effective, the input and output capacitors must be placed close to the device terminal as possible to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for V_{IN} , V_{OUT} , and GND helps minimize the parasitic electrical effects. The CT trace must be as short as possible to reduce parasitic capacitance.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

LAND PATTERN EXAMPLE
SCALE:25X

SOLDER MASK DETAILS

4222524/A 11/2015

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/sluea271).
5. Vias are optional depending on application, refer to device data sheet. If some or all are implemented, recommended via locations are shown.

EXAMPLE STENCIL DESIGN

DML0010A

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

SOLDER PASTE EXAMPLE
 BASED ON 0.125 mm THICK STENCIL

EXPOSED PAD
 83% PRINTED SOLDER COVERAGE BY AREA
 SCALE:35X

4222524/A 11/2015

NOTES: (continued)

- 6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
