

500mA Output Current, High Speed LDO Regulators,
Thermal Shutdown Function, Ceramic Capacitor Compatible

GENERAL DESCRIPTION

The XC6214 series are highly precise, low noise, high current, positive voltage, low dropout voltage regulators. They are fabricated using CMOS process. The series features a voltage reference, an error amplifier, a current limiter, a thermal protection circuit, and a phase compensation circuit plus a driver transistor.

The output voltage is selectable in 1.2V, 1.5V, 1.8V, 2.5V, 3.0V and 3.3V.

The series is also compatible with low ESR ceramic capacitors, which provides stable output voltage. This stability can be maintained even during load fluctuations due to the excellent transient response.

The over current protection circuit and the thermal shutdown circuit are built in. The over current protection circuit will operate when the output current reaches limit current. The thermal shutdown circuit will operate when the junction temperature reaches limit temperature.

APPLICATIONS

Optical disk drive
Magnetic disk drive
Digital still cameras / Camcorders
Smart phones / Mobile phones
Note PCs / Tablet PCs
Mobile devices / terminals
Wireless LAN
Reference voltage sources
Multi-function power supplies

FEATURES

Maximum Output Current	: More than 500mA (800mA limit)
Dropout Voltage	: 500mV @ I _{OUT} = 500mA (V _{OUT} =3.3V)
Operating Voltage Range	: 1.8V ~ 6.0V
Output Voltage	: 1.2V, 1.5V, 1.8V, 2.5V, 3.0V, 3.3V (standard) Other voltages between 1.2V to 5.0V (semi-custom)
High Accuracy	: Setting voltage accuracy ± 2%
Low Power Consumption	: 8 μA (TYP.)
Ripple Rejection Rate	: 40dB @ 1kHz
Current Limit Circuit Built-In	
Thermal Shutdown Circuit Built-In	
Ceramic Capacitor Compatible	
Operating Ambient Temperature	: - 40 ~ 85
Packages	: SOT-89, TO-252
Environmentally Friendly	: EU RoHS Compliant, Pb Free

Circuit

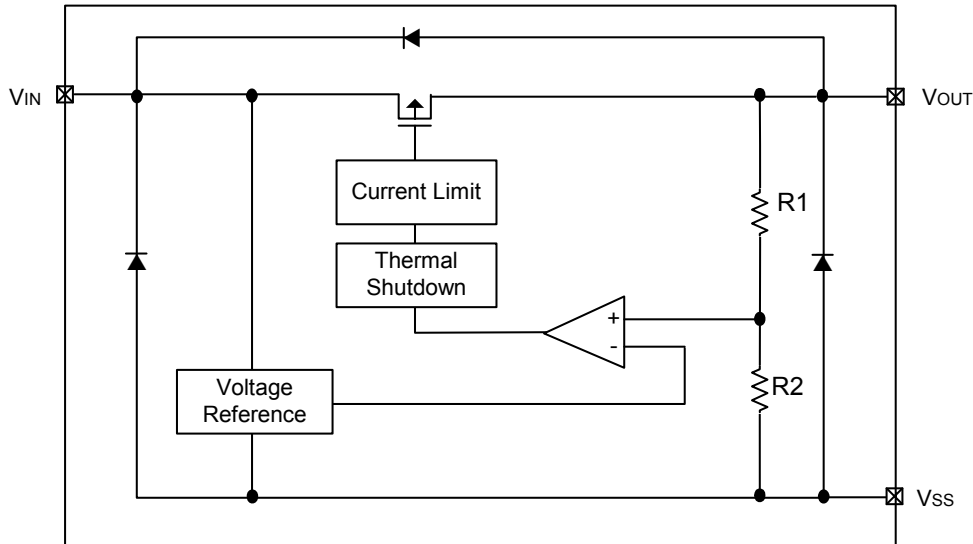

Circuit

OPERATIONAL EXPLANATION

<Output Voltage Regulator Control>

The voltage, divided by resistors R1 & R2, which are connected to the V_{OUT} pin is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET, which is connected to the V_{OUT} pin, is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled & stabilized by negative feedback. The current limit circuit and over current protection operate in relation to the level of output current and heat.

<Low ESR Capacitors>

With the XC6214 series regulator, a stable output voltage is achievable even if low ESR capacitors are used, as a phase compensation circuit is built-in to the regulator. In order to ensure the stability of the load transient response and line transient response, we suggest that an output capacitor (C_L) be connected as close as possible, between the output pin (V_{OUT}) and the V_{SS} pin. Please use an output capacitor (C_L) with a capacitance more than $0.1 \mu F$. We also suggest an input capacitor (C_{IN}) of $0.1 \mu F$: this should be connected between V_{IN} and V_{SS} in order to stabilize input power source.

<Current Limiter, Short-Circuit Protection>

The XC6214 series regulator offers a combination of current limit and circuit protection by means of a built-in fixed current limiter circuit and a foldback circuit. When the output pin is shorted, a current of about 50mA flows.

<Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level (150 TYP.), the thermal shutdown circuit operates and the driver transistor will be set to OFF. The thermal shutdown function will be released (automatically recovered) when the junction temperature decreases to the thermal shutdown release temperature level (125 TYP.) and the IC re-starts the operation.

NOTES ON USE

1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. Please wire the input capacitor (C_{IN}) and the output capacitor (C_L) as close to the IC as possible.
4. Output voltage may increase when the IC is used at light load current (around 0 to $2 \mu A$) depending on temperature conditions, etc.

PACKAGING INFORMATION

SOT-89

TO-252

TO-252 Power Dissipation

Power dissipation data for the TO-252 is shown in this page.
 The value of power dissipation varies with the mount board conditions.
 Please use this data as the reference data taken in the following condition.

1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm (1600 mm² in one side)
 Copper (Cu) traces occupy 50% of the board area
 In top and back faces
 Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6 mm
- Through-hole: 4 x 0.8 Diameter

Evaluation Board (Unit: mm)

2. Power Dissipation vs. Ambient Temperature

Board Mount ($T_j \text{ max} = 125$)

Ambient Temperature ()	Power Dissipation Pd (mW)	Thermal Resistance (/W)
25	1800	55.56
85	720
