

General Description

SN74LVC1G00 is A 2 - input and non-gate integrated circuit, which can realize the mathematical logic operation of $Y=\overline{A+B}$ and $Y=\overline{A^*B}$. Advanced CMOS process design, with low power consumption and high output driving capability, the power supply voltage VCC between 1.65V and 5.5V chip can work normally. 74LVC1G00 has a variety of small encapsulation shapes, which can be widely used in high-end precision instruments, miniaturized and low-power hand-held devices, as well as artificial intelligence and other fields.

Features

- Low input current.
- Low static power consumption.lcc=0.1uA.
- High output drive.VCC=4.5V.
- Wide operating voltage range.1.65V-5.5V
- Packaging form:DBV/DRL/YZP/DCK DRP/DSF/DPW

Applications

- Portable audio interface
- Blu-ray players and home theaters
- Solid state drives

- Digital TV
- Wireless headphones, smart watches, etc
- Smart wearable Devices

	Continuous current through V _{CC} or GND		±100	mA	

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
 The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
