

SARA-R510AWS module

LTE-M AWS IoT ExpressLink module

Designed to directly access AWS IoT Services securely over LTE-M

- Direct AWS IoT cloud access secured with hardware-based root of trust
- Optimized, easy-to-use AT command set for accelerated time-to-market
- Unburden the host processor from connectivity and cryptography tasks
- Access to AWS IoT Device and Fleet management and 200+ optional AWS services

SARA-R510AWS

Product description

The SARA-R510AWS is an AWS IoT ExpressLink module based on the u-blox UBX-R5 cellular chipset, aimed at fast and easy development of secure IoT devices.

By bridging the u-blox in-house chipset platform with the market-leading cloud computing services of AWS, this solution provides long-term availability and lifetime support from silicon-to-cloud.

The LTE-M module supports a comprehensive set of 3GPP Rel. 14 features that are relevant for IoT applications, like improvements to power consumption, coverage, data rate, mobility, and positioning. They are 5G-ready, meaning customers will be able to (software) upgrade their deployed devices, once 5G LTE has been fully rolled out by mobile operators, greatly improving end-product scalability and lifetime.

The embedded AWS IoT ExpressLink certified software provides a new tailored AT command set that paves the way to AWS cloud access straight out-of-the-box, which significantly accelerates time-to-market.

SARA-R510AWS provides AWS cloud service access without the need for the customer to integrate any additional API on their MCU; every single step is handled inside the IoT module. SARA-R510AWS is the perfect fit for new applications requiring accelerated time-to-market. It is also an ideal way to renew resource-constrained legacy applications that cannot accommodate the additional code and APIs that are usually required to access AWS cloud services.

SARA-R510AWS has been optimized for extremely low power consumption, using less than 1 µA of current in PSM mode, and is ideal for battery-powered applications. Combined with an internal, hardware-based secure element, a lightweight set of AT commands, and seamless access to AWS cloud, the solution protects your business-critical data from device to cloud without heavily investing in R&D resources to master provisioning, authentication, certification, and security.
