

Summary

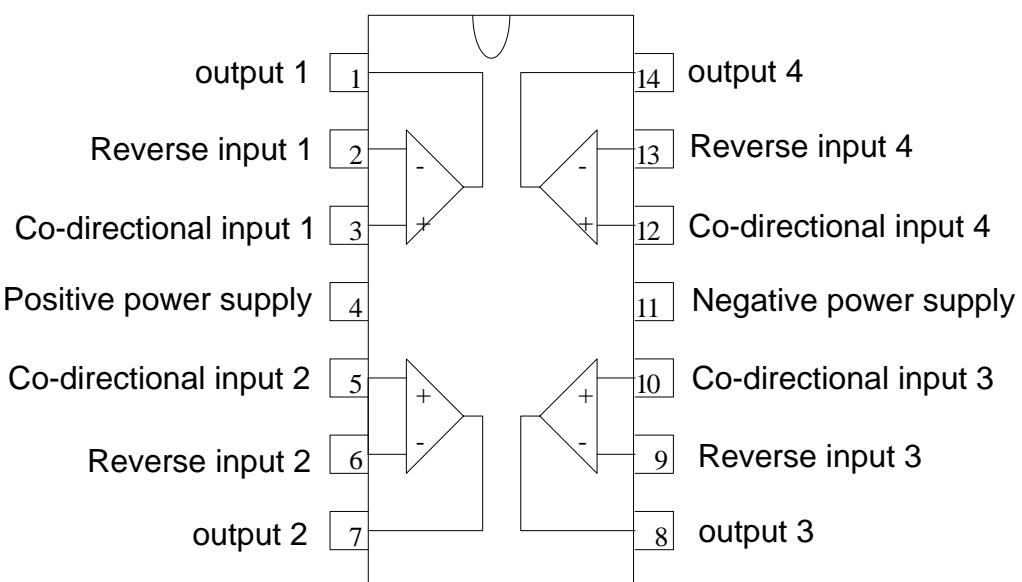

TL084 is a high-speed operational amplifier with four J-FET inputs, which consists of high-voltage J-FET and bipolar transistor.

It has high conversion rate, low input bias current and offset current, and low offset voltage temperature coefficient.

Main feature

- Wide common-mode and differential-mode input voltage range
- Low input bias current and offset current
- Output short-circuit current protection
- High input impedance
- Internal frequency compensation
- Self-latching station
- High conversion rate: 16V/us
