

MC34072

LINEAR INTEGRATED CIRCUIT

HIGH SLEW RATE, WIDE BANDWIDTH, SINGLE SUPPLY OPERATIONAL AMPLIFIER

DESCRIPTION

The UTC **MC34072** offer 4.5MHz of gain bandwidth product, 13V/ μ s slew rate and fast setting time without the use of JFET device technology. Although it can be operated from split supplies, it is particularly suited for single supply operation, since the common mode input voltage range includes ground potential (V_{EE}). With A Darlington input stage, it exhibits high input resistance, low input offset voltage and high gain. The all NPN output stage, characterized by no deadband crossover distortion and large output voltage swing, provides high capacitance drive capability, excellent phase and gain margins, low open loop high frequency output impedance and symmetrical source/sink AC frequency response.

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged.

Absolute maximum ratings are stress ratings only and functional device operation is not implied.

2. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded.

3. Either or both input voltages should not exceed the magnitude of V_{CC} or V_{EE}.

4. It is guarantee by design, not 100% be tested.
