

Bulk Metal® Foil Technology RNC90Y and RNC90Z (Z-Foil) to MIL-PRF-55182/9

FEATURES

- QPL product with established reliability (ER)
- “R” level high reliability resistor qualified to MIL-PRF-55182/9
- Load life stability: $\pm 0.05\%$ ΔR for 2000 h, 0.3 W at +125°C
- Temperature coefficient of resistance (TCR): ± 2 ppm/°C max. (-55°C to +175°C)
- Resistance tolerance: to $\pm 0.005\%$
- Thermal EMF: < 0.1 $\mu\text{V}/^\circ\text{C}$
- Qualified resistance range:
4.99 Ω to 121 k Ω (RNC90Y)
30.1 Ω to 121 k Ω (RNC90Z)
- Specially conditioned non-QPL resistors available
See data sheet “Improved Performance Tested”
- Fast thermal stabilization
- Electrostatic discharge (ESD) above 25 000 V
- Non inductive, non capacitive design
- Current noise < -42 dB
- Prototype sample available

INTRODUCTION

Military Established Reliability resistors from Vishay Foil Resistors (VFR) are available in resistance values from 4.99 Ω through 121 k Ω and with tolerances from $\pm 0.005\%$ to $\pm 1.0\%$. The same resistors are also available as non-qualified products for customers desiring higher or lower resistance values and the same or better performance capabilities (see Table 2). Both qualified and non-qualified versions are manufactured on the same production line facilities and are subjected to the same process, lot control, conditioning, and GRP A (100%) screening. Qualified versions receive additional MIL Group B and C testing.

The RNC90Y has been the benchmark for high-precision, established-reliability discrete resistors since 1982. In 2000, our engineers achieved a technological breakthrough with the introduction of the commercial ultra-precision, low-TCR Z201 resistor. This breakthrough allowed for the introduction of a resistor with very low TCR and an “R” reliability level. The RNC90Z TCR limit of ± 2 ppm/°C over the extended range of -55°C to +175°C is a significant improvement over the existing RNC90Y specification.

The RNC90Z is a direct replacement for the RNC90Y.

Notes

- (1) Qualification and failure rate verification test data is maintained by Vishay Foil Resistors and is available upon request. Lot traceability and identification data is maintained by VFR for 7 years.
- (2) Load life ΔR Maximum can be reduced by 80% through a screening procedure. Consult our Applications Engineering for details.
- (3) Inductance (L) due mainly to the leads.
- (4) Not to exceed power rating of resistor.
- (5) μV/°C relates to EMF due to lead temperature differences and μV/W due to power applied to the resistor.

S555 and Z555 units are manufactured on the same production line facilities and are subjected to all the same process and lot control requirements imposed on RNC90Y (Z) version, as well as all of the special screening, environmental conditioning and documentation stipulations outlined in MIL-PRF 55182/9

Table 3 – Global Part Number Information

NEW GLOBAL PART NUMBER: Y1189100R500AR0L (preferred part number format)

FOR EXAMPLE: ABOVE GLOBAL ORDER Y1189 100R500 A R 0 L:

TYPE: RNC90Z
VALUE: 100.5 Ω
ABSOLUTE TOLERANCE: ±0.05%
LIFE FAILURE RATE (LFR): ±0.01%
AER: standard
PACKAGING: bulk pack

HISTORICAL PART NUMBER: RNC90Z 100R50 A R B (will continue to be used)

Note

- ⁽¹⁾ Applicable only for QPL part. For S555 and Z555 please omit the Life Failure Rate designator from the part number.
- ⁽²⁾ For non-standard requests, please contact application engineering.

The response of military and non military grade resistors to environmental stresses can be made better by “Improved Performance Testing” (IPT). The IPT part will see burn-in and cycling that removes the “knee” from the normal drift of non IPT parts. (See Table 4 for the improvement to expect in military parts when calling for VFR recommended screening). Users should be aware that IPT testing renders the part non QPL and so a 3XXXXX part number will be assigned by VFR. Consult Applications Engineering for details and ordering advice.
