

Vishay Siliconix

# **Buffered H-Bridge Driver with Integrate MOSFET**

#### DESCRIPTION

The Si9987 is an integrated, buffered H-bridge with TTL compatible inputs and the capability of delivering a continuous 1 A at  $V_{DD} = 5$  V (room temperature) at switching rates up to 500 kHz. Internal logic prevents the upper and lower outputs of either half-bridge from being turned on simultaneously. Unique input codes allow both outputs to be forced low (for braking) or forced to a high impedance level.

The Si9987 is available in an 8-pin SOIC package, specified to operate over a voltage range of 3.8 V to 13.2 V, and the commercial temperature range of  $0 \degree \text{C}$  to  $70 \degree \text{C}$  (C suffix) and -  $40 \degree \text{C}$  to  $85 \degree \text{C}$  (D suffix). The Si9987 is available in lead free.

#### FEATURES

- 1 A H-bridge
- 500 kHz switching rate
- Shoot-through limited
- TTL compatible inputs
- 3.8 V to 13.2 V operating range
- Surface mount packaging1 A H-bridge

#### APPLICATIONS

- VCM driver
- Brushed motor driver
- Stepper motor driver
- Power converter
- Optical disk drives
- Power supplies
- · High performance servo

#### FUNCTIONAL BLOCK DIAGRAM, PIN CONFIGURATION AND TRUTH TABLE

Notes:

a. Device mounted with all leads soldered or welded to PC board. b. Derate 10 mW/°C above 25 °C. c.  $T_J = T_A + (P_D x \theta_{JA}), P_D =$  power dissipation.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
