

Resistor LED for 12 V Supply Voltage

DESCRIPTION

These devices are developed for the automotive industry and other industries which use 12 V sources.

The TLRP4900CU series contains an integrated resistor for current limiting in series with the LED chip. This allows the lamp to be driven from a 12 V source without an external current limiter.

The luminous intensity of such an LED is measured at constant voltage of 12 V.

These untinted non diffused lamps provide a wide off-axis viewing angle.

These LEDs are intended for space critical applications such as automobile instrument panels, switches and others which are driven from a 12 V source.

FEATURES

- With current limiting resistor for 12 V
- Cost effective: save space and resistor cost
- Standard \varnothing 3 mm (T-1) package
- Narrow viewing angle ($\varphi = \pm 16^\circ$)
- Luminous intensity categorized
- Luminous intensity and color are measured at 12 V
- Material categorization:
For definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS

- Status light in cars and other applications with a 12 V source
- Off/on indicator in cars and other applications with a 12 V source
- Background illumination for switches
- Off/on indicator in switches

PRODUCT GROUP AND PACKAGE DATA

- Product group: LED
- Package: 3 mm resistor
- Product series: standard
- Angle of half intensity: $\pm 16^\circ$

Note

Luminous intensity is tested at a current pulse duration of 25 ms. The above type numbers represent the order groups which include only a few brightness groups. Only one group will be shipped on each bag (there will be no mixing of two groups on each bag). In order to ensure availability, single brightness groups will not be orderable. In a similar manner for colors where wavelength groups are measured and binned, single wavelength groups will be shipped on any one bag. In order to ensure availability, single wavelength groups will not be orderable.
