DG411, DG412, DG413

Vishay Siliconix

Precision Monolithic Quad SPST CMOS Analog Switches

DESCRIPTION

The DG411 series of monolithic quad analog switches was designed to provide high speed, low error switching of precision analog signals. Combining low power (0.35 µW) with high speed (t_{ON}: 110 ns), the DG411 family is ideally suited for portable and battery powered industrial and military applications.

To achieve high-voltage ratings and superior switching performance, the DG411 series was built on Vishay Siliconix's high voltage silicon gate process. An epitaxial layer prevents latchup.

Each switch conducts equally well in both directions when on, and blocks input voltages up to the supply levels when off.

The DG411, DG412 respond to opposite control logic as shown in the Truth Table. The DG413 has two normally open and two normally closed switches.

FEATURES

- **Halogen-free according to IEC 61249-2-21 Definition**
- 44 V supply max. rating
- ± 15 V analog signal range
- On-resistance - $R_{DS(on)}$: 25 Ω
- Fast switching - t_{ON}: 110 ns
- Ultra low power - P_D: 0.35 µW
- TTL, CMOS compatible
- Single supply capability
- **Compliant to RoHS Directive 2002/95/EC**

BENEFITS

- Widest dynamic range
- Low signal errors and distortion
- Break-bevor-make switching action
- Simple interfacing

APPLICATIONS

- Precision automatic test equipment
- Precision data acquisition
- Communication systems
- Battery powered systems
- Computer peripherals

RoHS COMPLIANT

HALOGEN FREE

ABSOLUTE MAXIMUM RATINGS

Parameter		Limit	Unit
V + to V -		44	V
GND to V -		25	
V_L		(GND - 0.3) to (V+) + 0.3	
Digital Inputs[a], V_S, V_D		(V-) -2 to (V+) + 2 or 30 mA, whichever occurs first	
Continuous Current (Any terminal)		30	mA
Peak Current, S or D (Pulsed at 1 ms, 10 % duty cycle)		100	
Storage Temperature	(AK, AZ suffix)	- 65 to 150	°C
	(DJ, DY suffix)	- 65 to 125	
Power Dissipation (Package)[b]	16-pin plastic DIP[c]	470	mW
	16-pin narrow SOIC[d]	600	
	16-pin CerDIP[e]	900	
	LCC-20[e]	900	

Notes:
a. Signals on S_X, D_X, or IN_X exceeding V + or V - will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
b. All leads welded or soldered to PC board.
c. Derate 6 mW/°C above 25 °C.
d. Derate 7.6 mW/°C above 75 °C.
e. Derate 12 mW/°C above 75 °C.

Notes:
a. Refer to process option flowchart.
b. Room = 25 °C, Full = as determined by the operating temperature suffix.
c. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
d. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
e. Guaranteed by design, not subject to production test.
f. V_{IN} = input voltage to perform proper function.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

APPLICATIONS

Single Supply Operation:

The DG411, DG412, DG413 can be operated with unipolar supplies from 5 V to 44 V. These devices are characterized and tested for unipolar supply operation at 12 V to facilitate the majority of applications. In single supply operation, V+ is tied to V_L and V- is tied to 0 V. See Input Switching Threshold vs. Supply Voltage curve for V_L versus input threshold requirments.

Summing Amplifier

When driving a high impedance, high capacitance load such as shown in figure 8, where the inputs to the summing amplifier have some noise filtering, it is necessary to have shunt switches for rapid discharge of the filter capacitor, thus preventing offsets from occurring at the output.

Figure 8. Summing Amplifier

Vishay Siliconix maintains worldwide manufacturing capability. Products may be manufactured at one of several qualified locations. Reliability data for Silicon Technology and Package Reliability represent a composite of all qualified locations.
