## FEATURE

1. Small size and light weight
2. High reliability and stability
3. Reduced size of final equipment
4. High power
5. RoHS 2 Compliant with exemption 7C-1 and Halogen free products
6. Flammability against UL94-V0

## APPLICATION

- High accuracy dc-power supply
- Digital multi-meter
- Telecommunication
- Computer
- Automotive industry
- Medical and military equipment

## DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Tin (lead free) alloy.

## MARKING

For E24 ±5%, 0603/0805/1206/1210/2010/2512 size, each resistor is marked with a three-digit code on the protective coating to designate the nominal resistance value.

For E24 & E96 ±1%, 0805/1206/1210/2010/2512 size, each resistor is marked with a four-digit code on the protective coating to designate the nominal resistance value.

Example:

For E24 ±5%  
0603/0805/1206/1210/2010/2512

$$301 \rightarrow 30 \times 10^1 = 300 \Omega$$

For E24 & E96 ±1%  
0805/1206/1210/2010/2512

$$1542 \rightarrow 154 \times 10^2 = 15.4 \text{ K}\Omega$$

For Jumper, 0603/0805/1206/1210 size defines "000", 2010/2512 size defines "0000"

For E24 & E96 ±1%, 0603 size, each resistor is marked with a three-digit code on the protective coating to designate the nominal resistance value.

Example:

E24 ±1% : 3 Digits marking to identify the resistance value

0603

$$222 \rightarrow 22 \times 10^2 = 2.2 \text{ K}\Omega$$

E96 ±1% : 3 Digits marking to identify the resistance value

0603

## FUNCTIONAL DESCRIPTION

### Product characterization

Standard values of nominal resistance are taken from the E96&E24 series for resistors with a tolerance of  $\pm 1\%$ ,  $\pm 5\%$ . The values of the E96/E24 series are in accordance with "IEC publication 60063".

### Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

Fig.2 Maximum dissipation in percentage of rated power  
As a function of the ambient temperature

## STORAGE TEMPERATURE

... Products are recommended to be used up within one year as ensured shelf life.

Check solder ability in case shelf life extension is needed.

... To store products with following condition:

Temperature: 5 to 40°C ; Humidity: 20 to 70% relative humidity.

## SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.
