XBLW INA180/INA181

Zero Drift Bidirectional Current Detection Amplifier

WEB | www.xinboleic.com

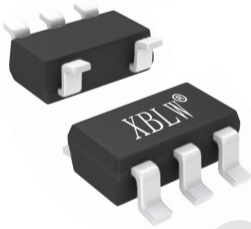
Descriptions

INA181 and INA180 are wideband, zero-drift, bidirectional current detection amplifiers, mainly used in battery monitoring, power management,Overcurrent detection, etc. The circuit can induce the voltage drop on the shunt resistor at a common-mode voltage ranging from -0.2V to 30V. The INA181 and INA180 circuits are integrated with a matching resistor gain network with four fixed gain options: 20 V/V, 50 V/V, 100 V/V and 200 V/V.

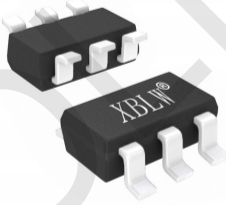
The INA181 and INA180 circuits are powered by a single source from 2.7V to 5.5V with a maximum supply current of 260μA.

Feature

- Rail to rail output
- Offset voltage:
  - ±150μV (maximum), VCM=0V
  - ±500μV (maximum), VCM=12V
- Accuracy and zero drift characteristics:
  - Gain error: ±1% (Max)
  - Offset drift: 1μV/°C (maximum)
  - Gain drift: 20ppm/°C (Max))
- Output voltage gain:
  - 20V/V（INA181 A1、INA180 A1、B1）
  - 50V/V（INA181 A2、INA180 A2、B2）
  - 100V/V（INA181 A3、INA180 A3、B3）
  - 200V/V（INA181 A4、INA180 A4、B4）
- High bandwidth:
  - 350kHz（INA181 A1、INA180 A1、B1）
- Package form:
  - INA180：SOT23-5
  - INA181：SOT23-6



SOT23-5



SOT23-6

Applications

- Motor control
- Lighting control
- Solar inverters
- Overcurrent detection
- Power management
- Battery monitoring

Typical application lines and instructions

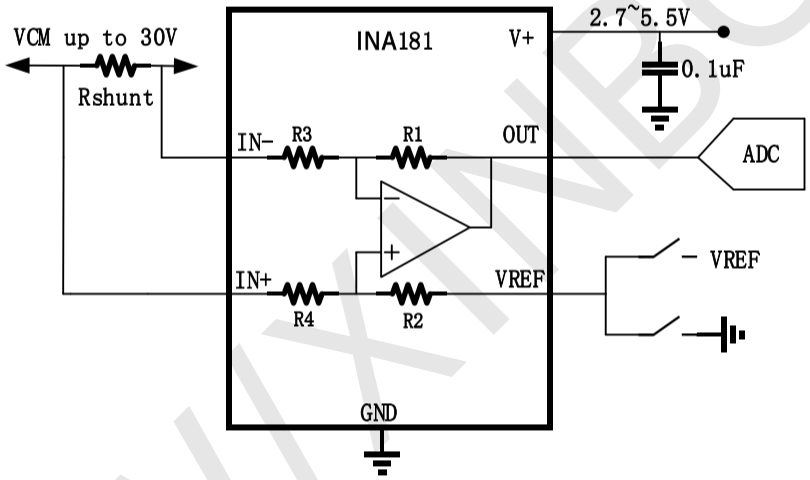

Figure 9 Typical application lines of INA181

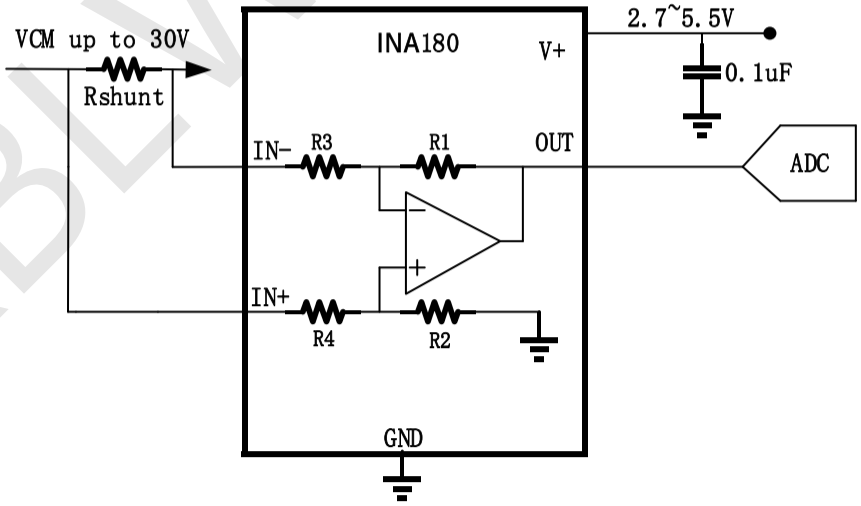

Figure 10 Typical application lines of INA180

Above, the basic application connection of INA181/INA180 is shown. Input pins IN+ and IN- should be directly connected to the detection resistor as much as possible,To minimize any resistance in series with the detection resistor. To ensure stability, it is necessary to use the power supply bypass capacitor, which is placed close to the device pin.

Statement:

- XBLW reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.

- Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using XBLW products for system design and whole machine manufacturing. And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!

- XBLW products have not been licensed for life support, military, and aerospace applications, and therefore XBLW is not responsible for any consequences arising from the use of this product in these areas.

- If any or all XBLW products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.

- The specifications of any and all XBLW products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.

- XBLW documentation is only allowed to be copied without any alteration of the content and with the relevant authorization. XBLW assumes no responsibility or liability for altered documents.

- XBLW is committed to becoming the preferred semiconductor brand for customers, and XBLW will strive to provide customers with better performance and better quality products.
