CONTENTS

1. Introduction

XTX SD NAND is an embedded storage solution designed in a LGA8 package form. The operation of SD NAND is similar to an SD card which is an industry standard.

SD NAND consists of NAND flash and a high performance controller. 3.3V supply voltage is required for the NAND area (VCC). SD NAND is fully compliant with SD2.0 interface, which allows most of general CPU to utilize. SD NAND has high performance at a competitive cost, high quality and low power consumption.

2. Product List

Capacity	Part number	Package	Size
1Gb	XTSD01GLGEAG	LGA8 (Land Grid Array)	8x6mm
	XTSD01GDLGEGA	LGA8 (Land Grid Array)	8x6mm
	XTSD01GCLGEGA	LGA8 (Land Grid Array)	8x6mm
	XTSD01GBLGEGA	LGA8 (Land Grid Array)	8x6mm
2Gb	XTSD02GLGEAG	LGA8 (Land Grid Array)	8x6mm
4Gb	XTSD04GLGEAG	LGA8 (Land Grid Array)	8x6mm
	XTSD04GCLGEGA	LGA8 (Land Grid Array)	8x6mm
8Gb	XTSD08GLGEAG	LGA8 (Land Grid Array)	8x6mm
	XTSD08GCLGEAG	LGA8 (Land Grid Array)	8x6mm

3. Features

- Support up to 50Mhz clock frequency
- Support 1/4 bit mode
- Built-in HW ECC Engine and highly reliable NAND management mechanism
- Write speed up to class 8
- Smaller package LGA8 (Land Grid Array)

4. Physical Characteristic Temperature

- Operation Conditions
  Temperature Range: Ta = -30 to +85 degrees centigrade

- Storage Conditions
  Temperature Range: Tstg = -40 to +85 degrees centigrade

6. Usage

6.1. SD Bus Mode protocol

The SD bus allows the dynamic configuration of the number of data line from 1 to 4 Bi-directional data signal. After power up by default, the SD card will use only DAT0. After initialization, host can change the bus width. Multiplied SD cards connections are available to the host.Common VDD, VSS and CLK signal connections are available in the multiple connections. However, Command, Respond and Data lined (DAT0-DAT3) shall be divided for each device from host.

This feature allows easy trade off between hardware cost and system performance. Communication over the SD bus is based on command and data bit stream initiated by a start bit and terminated by stop bit.

Command:
Commands are transferred serially on the CMD line. A command is a token to start   an operation from host to the device. Commands are sent to an addressed single card (addressed Command) or to all connected cards (Broad cast command).

Response:
Responses are transferred serially on the CMD line.
A response is a token to answer to a previous received command.   Responses are sent from an addressed single card or from all connected cards.

Data:
Data can be transfer from the card to the host or vice versa.
Data is transferred via the data lines .
        CLK: Host card Clock signal

        CMD: Bi-directional Command/ Response Signal

        DAT0 - DAT3: 4 Bi-directional data signal

        VDD: Power supply

        VSS: GND

6.2. Card Initialize

To initialize the SD NAND, follow the following procedure is recommended example.

1) Supply Voltage for initialization.
   Host System can apply the Operating Voltage from initialization to the card. Apply more than 74 cycles of Dummy-clock to the SD card.

2) Select operation mode (SD mode or SPI mode)
   In case of SPI mode operation, host should drive 1 pin (CD/DAT3) of SD Card I/F to "Low" level. Then, issue CMD0. In case of SD mode operation, host should drive or detect 1 pin of SD Card I/F (Pull up register of 1 pin is pull up to "High" normally). Card maintains the selected operation mode except re-issue of CMD0 or power on below is SD mode initialization procedure.

3) Send the ACMD41 with Arg = 0 and identify the operating voltage range of the Card.

4) Apply the indicated operating voltage to the card.
   Reissue ACMD41 with apply voltage storing and repeat ACMD41 until the busy bit is cleared. (Bit 31 Busy = 1) If response time out occurred, host can recognize not SD Card.

5) Issue the CMD2 and get the Card ID (CID).
   Issue the CMD3 and get the RCA. (RCA value is randomly changed by access, not equal zero)

6) Issue the CMD7 and move to the transfer state.
   If necessary, Host may issue the ACMD42 and disabled the pull up resistor for Card detect.

7) Issue the ACMD13 and poll the Card status as SD Memory Card. Check SD_CARD_TYPE value.
   If significant 8 bits are "all zero", that means SD Card. If it is not, stop initialization.

8) Issue CMD7 and move to standby state. Issue CMD9 and get CSD.
   Issue CMD10 and get CID.

9) Back to the Transfer state with CMD7.
   Issue ACMD6 and choose the appropriate bus-width.

Then the Host can access the Data between the SD card as a storage device.

7. Internal Information

7.1. Registers

The SD NAND has six registers and SD Status information: OCR, CID, CSD, RCA, DSR, SCR and SD Status. DSR IS NOT SUPPORTED in this card.
There are two types of register groups.
MMC compatible registers: OCR, CID, CSD, RCA, DSR, and SCR SD card Specific: SD Status

SD card Registers

Resister Name	Bit Width	Description
OCR	32	Operation Conditions (VDU Voltage Profile and Busy Status Information)
CID	128	Card Identification information
CSD	128	Card specific information
RCA	16	Relative Card Address
DSR	16	Not Implemented (Programmable Card Driver): Driver Stage Register
SCR	64	SD Memory Card"s special features
SD Status	512	Status bits and Card features

7.2. OCR Register

This 32-bit register describes operating voltage range and status bit in the power

supply. OCR register definition.

OCR bit position	VDD voltage window	Initial Value			
		1Gb	2Gb	4Gb	8Gb
31	Card power up status bit(busy)	"0" = busy "1" = ready			
30	Card Capacity Status	"0"= SD Memory Card "1"= SDHC Memory Card			
29-25	reserved	All „0"

10	Reserved	0			
9	Reserved	0			
8	Reserved	0			
7	Reserved for Low Voltage Range	0			
6	Reserved	0			
5	Reserved	0			
4	Reserved	0			
3-0	reserved	All „0"			

bit 23-4: Describes the SD Card Voltage; bit 31 indicates the card power up status. Value "1" is set after

power up and initialization procedure has been completed.

7.3. CID Register

The CID (Card Identification) register is 128-bit width. It contains the card identification information.
(Refer Appendix 3. for the detail) The Value of CID Register is vender specific.

Table 11: CID Register

Field	Width	CID-slice	Initial Value

Cell Type: R: Read Only, R/W: Writable and Readable, R/W(1): One-time Writable / Readable

Note: Erase of one data block is not allowed in this card. This information is indicated by "ERASE_BLK_EN".

Host System should refer this value before one data block size erase.
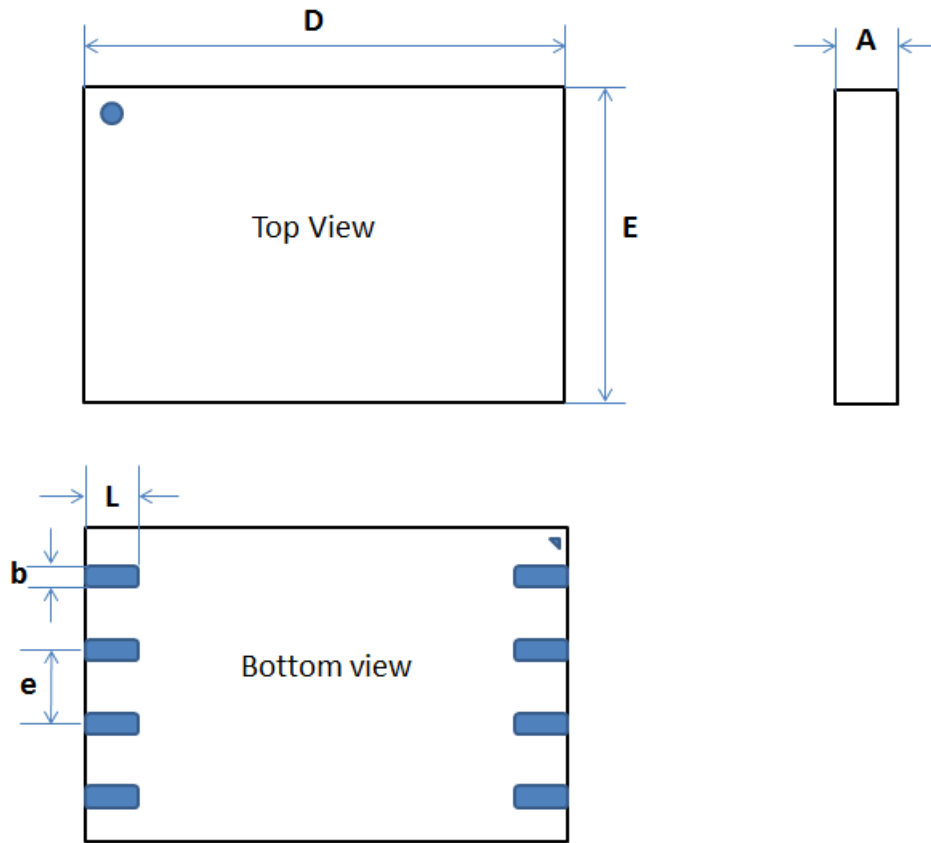

7.5. RCA Register

The writable 16bit relative card address register carries the card address in SD Card mode.

7.6. DSR Register

This register is not implemented on this card.

9. Ordering Information

The ordering part number is formed by a valid combination of the following

XT SD XXX A LG E G A

Company Prefix

XT = XTX

Product Family

SD = 2.7~ 3.6V SD2.0 NAND in package form

Product Density

01G = 1Gbit (128MByte)
02G = 2Gbit (256MByte)
04G = 4Gbit (512MByte)
08G = 8Gbit (1GByte)

Die Version

A , B, C, D or optional

Product Package

LG = LGA8 (Land Grid Array)

Temperature Grade

I = Extended (-40℃ to +85℃)
E = Extended (-30℃ to +85℃)
C = Extended (0℃ to +70℃)

Green Code

G = Green/Reach Package

10. Revision History

Version No.	Change Description	Date
V1.0	Initial release, part number is based on extended temperature, WSON 8*6mm package, tape & reel packing , 1Gb/2Gb/4Gb density were included .	2017/1/10
V1.1	Add 8Gb density , and correct some typos ;	2017/1/10
V2.1	Part number change from PNSDxxGWS to PNSDxxGLG; Package change from WSON8 to LGA8 ; Package dimension b change from 0.7mm to 0.6mm ; Package dimension picture updated without the dissipating pad ; Add a page for part number description ;	2017/1/22
V2.2	Modify part number description; Page head re-layout ;	2017/1/23
V2.3	Add SPI mode pin description	2017/2/1
V2.4	Set default Part number and PNSDxxGLGEAG (tray packing)	2017/2/14
V2.5	Part number update from PNSDxxxx to XTSDxxxx	2017/3/3
V2.6	Rename company name to XTX	2017/3/23
V2.7	Revise page #8,9 & 10 register table to include 8Gb, add cover page & page	2018/4/2
V2.8	Revise page #7 leakage unit error correction to uA.	2018/4/25
V2.9	Revise OPN to new ordering format & add new OPN, include manual content option	2018/10/23
