

## 3.3V Low Power Slew Rate Limited Half-Duplex RS-485 Transceiver

### Description

The [SP3483](#) device is part of a family of 3.3V low power half-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. This device is pin-to-pin compatible with the MaxLinear SP483 device as well as popular industry standards. The SP3483 features MaxLinear's BiCMOS design allowing low power operation without sacrificing performance. The SP3483 is slew rate limited to reduce EMI and can meet the requirements of the RS-485 and RS-422 protocols up to 250kbps.

### FEATURES

- RS-485 and RS-422 transceiver
- Operates from a single 3.3V Supply
- Interoperable with 5.0V logic
- Driver/receiver enable
- Low power shutdown mode
- -7V to +12V common-mode input voltage range
- Allows up to 32 transceivers on the serial bus
- Compatibility with the industry standard 75176 pinout
- Driver output short-circuit protection
- Slew rate limited driver for low EMI

Ordering Information - [Back Page](#)

SP3483

## Absolute Maximum Ratings

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V<sub>CC</sub> ..... 6.0V

### Input Voltages

Logic ..... -0.3V to 6.0V

Drivers ..... -0.3V to 6.0V

Receivers..... ±15V

### Output Voltages

Drivers ..... ±15V

Receivers..... -0.3V to 6.0V

Storage Temperature .....-65°C to +150°C

Maximum Junction Temperature, T<sub>J</sub> ..... 125°C

### Power Dissipation

8-pin NSOIC ..... 500mW

(derate 6.14mW/°C above +70°C)

## Operating Conditions

### Package Power Dissipation

8-pin NSOIC  $\Theta_{JA}$  ..... 128.4°C/W

## ESD Rating

Human Body Model (HBM)..... ±2kV

## Electrical Characteristics

T<sub>AMB</sub> = T<sub>MIN</sub> to T<sub>MAX</sub> and V<sub>CC</sub> = 3.3V ±5% unless otherwise noted.

NOTES

- 1: The input pulse is supplied by a generator with the following characteristics:  
PRR = 250kHz, 50% duty cycle,  $t_r < 6.0ns$ ,  $Z_O = 50\Omega$ .
- 2:  $C_L$  includes probe and stray capacitance.

## Description

The SP3483 device is part of a family of 3.3V low power half-duplex transceivers that meet the specifications of the RS-485 and RS-422 serial protocols. This device is pin-to-pin compatible with the MaxLinear SP483 device as well as popular industry standards. The SP3483 features MaxLinear's BiCMOS process allowing low power operation without sacrificing performance.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

## Drivers

The driver outputs of the SP3483 are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to 3.3 Volts. With worst case loading of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels. The drivers have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE (pin 3) will force the driver outputs into high impedance (high-Z).

The SP3483 has internally slew rate limited driver outputs to minimize EMI. The transceivers will operate up to 250kbps. The 250mA  $I_{SC}$  maximum limit on the driver output allows the SP3483 to withstand an infinite short circuit over the -7.0V to 12V common mode range without catastrophic damage to the IC.

## Receivers

The SP3483 receiver has differential inputs with an input sensitivity as low as ±200mV. Input impedance of the receivers is typically 15kΩ (12kΩ minimum). A wide common mode range of -7V to 12V allows for large ground potential differences between systems. The receiver of the SP3483 has a tri-state enable control input  $\overline{RE}$  (Pin 2). A logic LOW on  $\overline{RE}$  will enable the receiver, a logic HIGH on  $\overline{RE}$  will disable the receiver.

The receiver of the SP3483 will operate up to 250kbps. The receiver is equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected (open circuit).

## Shutdown Mode

The SP3483 is equipped with a Shutdown mode. To enable the shutdown state, both driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a Logic HIGH on  $\overline{RE}$  (pin 2) will put the SP3483 into Shutdown mode. In Shutdown, supply current will drop to typically 1μA, 10μA maximum.

INPUTS			LINE CONDITION	OUTPUTS	
$\overline{RE}$	DE	DI		B	A
X	1	1	No Fault	0	1
X	1	0	No Fault	1	0

## Revision History

Revision	Date	Description
06/23/04	--	Legacy Sipex Datasheet
01/09/12	1.0.0	Convert to Exar Format. Update ordering information as a result of discontinued Lead type package options. Add new Figure 8 - Driver Short Circuit Current Limit Test Circuit. Correct type error for no load supply current.
09/07/17	1.0.1	Update to MaxLinear logo. Remove GND from Differential Output Voltage min (page 2). Added maximum junction temperature, package power dissipation and ESD rating. Update format and ordering information table. Truth Tables moved to page 7 description section.
