Safety

This transducer must be used in electric/electronic equipment with respect to applicable standards and safety requirements in accordance with the manufacturer's operating instructions.

Caution, risk of electrical shock

When operating the transducer, certain parts of the module can carry hazardous voltage (eg. primary busbar, power supply).

Ignoring this warning can lead to injury and/or cause serious damage.

This transducer is a build-in device, whose conducting parts must be inaccessible after installation.

A protective housing or additional shield could be used.

Main supply must be able to be disconnected.

Dimensions HAS 50 .. 600-S/SP50 (in mm. 1 mm = 0.0394 inch)

Mechanical characteristic

- General tolerance ± 0.5 mm

- Notes:**
- ¹⁾ Operating at $\pm 12 \text{ V} \leq V_c < \pm 15 \text{ V}$ will reduce the measuring range
 - ²⁾ If the customer uses 1 k Ω of the load resistor, the primary current has to be limited as the nominal;
To measure the full defined measuring range, the load resistor should be at minimum 10 k Ω
 - ³⁾ Linearity data exclude the electrical offset
 - ⁴⁾ Please refer to derating curves in the technical file to avoid excessive core heating at high frequency
 - ⁵⁾ Please consult characterisation report for more technical details and application advice.
