

XC62FP

Series

Positive Voltage Regulators

◆ CMOS Low Power Consumption

◆ Small Input-Output Voltage Differential

: 0.12V @ 100mA,
0.38V @ 200mA

◆ Maximum Output Current : 250mA (V_{OUT}=5.0V)

◆ Output Voltage Range : 2.0V~6.0V

◆ Highly Accurate : ±2% (±1%)

3

■ General Description

The XC62FP series is a group of positive voltage output, three-pin regulators, that provide a high current even when the input/output voltage differential is small. Low power consumption and high accuracy is achieved through CMOS and laser trimming technologies.

The XC62FP consists of a high-precision voltage reference, an error amplification circuit, and a current limited output driver. Transient response to load variations have improved in comparison to the existing series.

SOT-23 (150mW), SOT-89 (500mW) and TO-92 (300mW) packages are available.

■ Applications

- Battery Powered Equipment
- Palmtops
- Portable Cameras and Video Recorders
- Reference Voltage Sources

■ Features

Maximum Output Current

: 250mA
(within max. power dissipation, V_{OUT} = 5.0V)

Output Voltage Range

: 2.0V ~ 6.0V in 0.1V increments
(1.5V ~ 1.9V for custom products)

Highly Accurate: Output voltage ±2%
(±1% for semi-custom products)

Low Power Consumption

: Typ. 2.0µA @ V_{OUT}=5.0V

Output Voltage Temperature Characteristics
: Typ. ±100ppm/°C

Input Stability : Typ. 0.2%/V

Small Input-Output Differential

: I_{OUT} = 100mA @ V_{OUT} = 5.0V with a
0.12V differential.

Ultra Small Packages

: SOT-23 (150mW) mini-mold,
SOT-89 (500mW) mini-power mold
TO-92 (300mW)

Note: 1. V_{OUT}(T)=Specified Output Voltage .2. V_{OUT}(E)=Effective Output Voltage (i.e. the output voltage when "V_{OUT}(T)+1.0V" is provided at the V_{IN} pin while maintaining a certain I_{OUT} value).3. V_{dif}= {V_{IN1} (Note4)-V_{OUT} (E)}4. V_{IN1}= The input voltage at the time 98% of V_{OUT}(E) is output (input voltage has been gradually reduced).

■ Directions for use

● Notes on Use

1. Please use this IC within the stipulated absolute maximum ratings as the IC is liable to malfunction outside of such parameters.
2. There is a possibility that oscillation may occur as a result of the impedance present between the power supply and the IC's input. Where impedance is 10Ω or more, please use a capacitor (C_{IN}) of at least $1\mu F$. With a large output current, operations can be stabilised by increasing capacitor size (C_{IN}). If C_{IN} is small and capacitor size (C_L) is increased, there is a possibility of oscillation due to input impedance. In such cases, operations can be stabilised by either increasing the size of C_{IN} or decreasing the size of C_L .
3. Please ensure that output current (I_{OUT}) is less than $P_d \div (V_{IN} - V_{OUT})$ and does not exceed the stipulated Continuous Total Power Dissipation value (P_d) for the package.
4. Should you wish to increase output current (I_{OUT}) and/or have the capability to exceed the stipulated P_d value, using a current boost circuit (similar to the one shown below) is likely to lead to oscillation.

With such applications, we recommend use of a boost type voltage regulator, such as the Torex XC62EP series.
