■ Performance Characteristics

Power Derating Curve

The Operating Temperature Range: $-55^{\circ}\text{C} \sim +170^{\circ}\text{C}$.

For resistors operated in ambient temperatures above 70°C , power rating must be derating in accordance with the curve below.

■ Rating Current

The following equation may be used to determine the DC (Direct Current) or AC (Alternating Current) (RMS, root mean square value) of normal rated power. However, if the result value exceeds the highest current of regulated standards (paragraph 5), the highest normal rated power is to be used

$$I = \sqrt{P/R}$$

I = Rating current (A)
P = Rating Power (W)
R = Resistance (Ω)

■ Inductance characteristics: $\leq 5\text{nH}$ (Circuit frequency is below 1MHz)

■ Marking Format:

- All the other products marking are 4 digits.
- "R" designates the decimal location in ohms
e.g. $1\text{m}\Omega$ the product marking is R001.
 $25\text{m}\Omega$ the product marking is R025.
 $100\text{m}\Omega$ the product marking is R100.
- "m" designates the decimal location in milli-ohms
e.g. $5.5\text{m}\Omega$ the product marking is 5m50.
 $25.5\text{m}\Omega$ the product marking is 25m5.
- The criteria to distinguishing the mark on the surface of products are that characters can be identified.
