

# 2.75V-42V, Low I<sub>Q</sub>, LDO Linear Regulator

## 1 FEATURES

- Automotive AEC-Q100 Grade 1 Compliance
- Ultra-Low I<sub>Q</sub> < 5.5μA
- Wide Input Voltage Range: 2.75V to 42V
- ±2%, 3.3V, 5V and 15V Fixed Outputs and 0.6V to 24V Adjustable Output
- Up to 200mA/100mA Output Current
- Shutdown Current < 1μA
- PG Indicator with Adjustable Delay for MCU Applications
- High PSRR 70dB @ 100Hz
- Stable Close-Loop Operation with only 1μF Low-ESR Ceramic Output Capacitor
- Low Dropout: 130mV @ 100mA
- Up to 42V High Voltage EN Pin with Logic Threshold
- Over-Current Protection
- Over Temperature Shutdown and Auto Restart
- Internal Soft Start
- -40°C to 150 °C Junction Temperature
- Thermally Enhanced MSOP-EP8 Package

## 2 APPLICATIONS

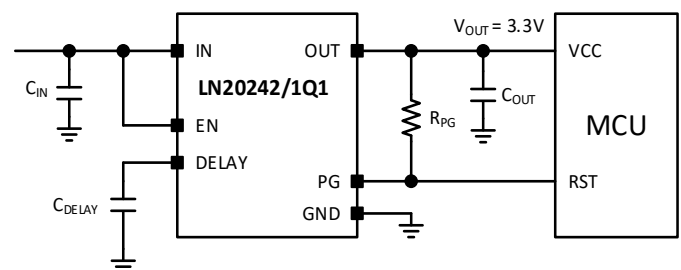

- Automotive Power Supplies
- Industrial Power Supplies
- Battery Powered Systems

## 3 DESCRIPTION

LN20X42/1Q1 are ultra-low quiescent current, low dropout linear regulators (LDOs) with a wide input voltage range of 2.75V to 42V. The series provides 3.3V, 5V and 15V fixed outputs or 0.6V to 24V adjustable output, and delivers up to 100mA or 200mA output current. The shutdown current of LN20X42/1Q1 is less than 1μA, while the quiescent current under no-load condition is less than 5.5μA.

LN20X42/1Q1 provides a power good indicator with programmable delay to directly drive the reset pin of a microprocessor (MCU), moreover, there are options of highly accurate fixed output of 5V or 3.3V.

LN20X42/1Q1 features over-current protection and over-temperature shutdown with auto restart. The product family is available in thermally enhanced MSOP-EP8 package.

## 6 PIN CONFIGURATION AND FUNCTION

### 6.1 With PG and DELAY Pins

#### 6.1.1 Pin Configuration

#### 6.1.2 Pin Function

Name	Number	Description
<b>IN</b>	1	Input pin, place a ceramic capacitor of at least 1 $\mu$ F between IN and GND.
<b>EN</b>	2	Enable pin, connect to a logic control signal or to IN directly.
<b>NC</b>	3	Connect to GND.
<b>GND</b>	4	Connect to GND.
<b>DELAY</b>	5	Power good delay pin, place a ceramic capacitor between DELAY and GND.
<b>PG</b>	6	Power good pin, open drain, connect a pull-up resistor between PG and an external supply or to OUT pin, if not used, keep floating.
<b>FB</b>	7	Feedback pin, connect to the center leg of the voltage divider between OUT and GND. This pin has no internal connection for fixed output versions
<b>OUT</b>	8	Output pin, place a ceramic capacitor of at 1 $\mu$ F between OUT and GND.

## 6.2 Low I<sub>Q</sub> (Without PG and DELAY Pins)

### 6.2.1 Pin Configuration

### 6.2.2 Pin Function

Name	Number	Description
IN	1	Input pin, place a ceramic capacitor of at least 1 $\mu$ F between IN and GND.
EN	2	Enable pin, connect to a logic control signal or to IN directly.
NC	3	Connect to GND.
GND	4	Connect to GND.
NC	5	Connect to GND.
NC	6	Connect to GND.
FB	7	Feedback pin, connect to the center leg of the voltage divider between OUT and GND. This pin has no internal connection for fixed output versions.
OUT	8	Output pin, place a ceramic capacitor of at 1 $\mu$ F between OUT and GND.

## 6.3 Package Thermal Parameters

Parameter <sup>(1)</sup>		MSOP-EP8	Units
R <sub>θJA</sub>	Junction-to-Ambient Thermal Resistance	58	°C/W
ψ <sub>JT</sub>	Junction-to-Top Characterization Parameter	3	°C/W

(1) Measurements are based on standard 2s2p PCB defined in JESD 51-7 2s2p, under no wind, 2W loss, and 25 °C ambient temperature.

## 7 SPECIFICATIONS

### 7.1 Absolute Maximum Ratings

Parameters	Min	Max	Unit
$V_{IN}$	-0.3	45	V
$V_{EN}$	-0.3	$V_{IN}$	
$V_{FB}$	-0.3	5.5	
$V_{PG}$	-0.3	5.5	
$V_{OUT}$	-0.3	$V_{IN}$	
$V_{DELAY}$	-0.3	2	
Junction Temperature	-40	150	°C
Storage Temperature	-55	150	

### 7.2 ESD Ratings

Parameters	Min	Max	Unit
HBM Human Body Model		±3000	V
CDM Charge Device Model		±750	

### 7.3 Recommended Operating Condition

Parameters	Min	Max	Unit
$V_{IN}$	-0.3	42	V
$V_{EN}$	-0.3	$V_{IN}$	
$V_{FB}$	-0.3	0.7	
$V_{PG}$	-0.3	5.5	
$V_{OUT}$	-0.3	24	
$V_{DELAY}$	-0.3	2	
Junction Temperature	-40	150	°C

## 7.4 Electrical Characteristics

Unless otherwise stated, the minimum and maximum limits apply over the recommended operating junction temperature range of -40°C to 150°C. Typical values are measured at 25°C and represent the most likely norm. The default conditions apply:  $V_{IN} = 13.5V$ .

Symbol	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
<b>VIN, VOUT (IN, OUT, GND PINS)</b>						
$V_{IN}$	Operating Input Voltage Range		2.75		42	V

## 8 FUNCTIONAL DESCRIPTION

### 8.1 Overview

LN20X42/1Q1 are ultra-low quiescent current, low dropout linear regulators (LDOs) with a wide input voltage range of 2.75V to 42V. The series provides 3.3V, 5V and 15V fixed outputs or 0.6V to 24V adjustable output, and delivers up to 100mA or 200mA output current. The shutdown current of LN20X42/1Q1 is less than 1 $\mu$ A, while the quiescent current under no-load condition is less than 5.5 $\mu$ A.

LN20X42/1Q1 provides a power good indicator with programmable DELAY pin to directly drive the reset pin of a microprocessor (MCU), moreover, there are options of highly accurate fixed output of 5V or 3.3V.

LN20X42/1Q1 features over-current protection and over-temperature shutdown with auto restart. The over-current threshold drops when the input voltage is above 28V.

The product family is available in thermally enhanced MSOP-EP8 package.

### 8.2 Functional Diagram

Figure 23. LN20X42/1Q1 Functional Diagram

## 9 APPLICATIONS

### 9.1 Application Diagram with Full Features

Figure 24. LN20042/1Q1 with full features

### 9.2 Minimum Application Diagram

Figure 25. LN20X42/1Q1 with minimum external components

### 9.3 Application Considerations

#### 9.3.1 Input and Output Decouple Capacitors

For control loop stabilities, LN20X42/1Q1 integrates internal compensation and only requires ceramic capacitors with minimum capacitance of 1uF between VIN and GND, and VOUT and GND, respectively. It is recommended that the capacitor is placed as close to the device pins as possible with minimum PCB trace length.

#### 9.3.2 EN Pin

EN is the enable pin of the internal device supply and the output of the LDO. When the voltage on EN pin rises above the rising threshold  $V_{EN-H}$ , the LDO output is allowed; and when the voltage on EN falls below the falling threshold  $V_{EN-L}$ , the LDO output is disabled and the device goes into shutdown mode. Another way of using EN pin is connecting EN directly to the input voltage, the pin has the same maximum operating voltage of 42V as the LDO input.

#### 9.3.3 OUT and FB Pins

To adjust the output voltage, connect a voltage divider between OUT and GND, and connect the center of the divider to FB pin. The steady state  $V_{FB}$  is typically at 0.6V. The output voltage can be derived from:

$$V_{OUT} = \left(1 + \frac{R_1}{R_2}\right) \times V_{FB}$$

To fully utilize the low  $I_Q$  capability of the product family, it is recommended to use resistors with tolerance better than 1%, and with temperature coefficients less than 100ppm for the divider design. A typical selection of  $R_2$  is 1M $\Omega$ ,  $R_1$  can then be calculated from:

$$R_1 = \frac{V_{OUT} - V_{FB}}{V_{FB}} \times R_2$$

When using the fixed VOUT products, there is no external divider.

### 9.3.4 PG and DELAY Pins

The PG pin is connected to the open drain of an internal N-MOSFET. Externally, the PG pin needs to be pulled up to a voltage source by a resistor. The PG pin can directly drive the reset pin of a MCU. When EN is high and  $V_{OUT}$  rises above the power good threshold  $V_{PG-RISE}$ , the DELAY pin starts to output a current  $I_{D-Charge}$  to charge the external delay capacitor, when the voltage on the DELAY pin rises across  $V_{D-RISE}$ , PG is pulled up. The external delay capacitor is selected based on the desired MCU delay  $t_{Delay}$  and is calculated based on:

$$C_{Delay} = \frac{I_{D-Charge} \times t_{Delay}}{V_{D-Rise}}$$

## 10 PACKAGE INFORMATION

### 10.1 Package Outline

#### Notes:

1. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
2. Both package length and width does not include mold flash.
3. Unremoved flash between leads & package end flash shall not exceed 0.15mm from bottom body per side.
4. Features may not present.

**10.2 Footprint Example**

**LAND PATTERN EXAMPLE**  
EXPOSED METAL SHOWN

**SOLDER PASTE EXAMPLE**  
BASED ON 0.125 mm THICK STENCIL

### **IMPORTANT NOTICE AND DISCLAIMERS**
