

Uni-polar, Hall-Effect Switch IC

1 Product Description

The MT871X family is produced by BCD technology with both high performance and high reliability. The Hall IC internally includes an on-chip Hall voltage generator, a voltage regulator for operation with supply voltage of 2.4V to 24V, temperature compensation circuitry, small-signal amplifier, Hall IC with dynamic offset cancellation system, Schmitt trigger and an open collector output. It also includes an clamp diode at output and reversed power supply protection enhances the robustness of Hall IC.

The Hall IC designed to respond to a single poles. While the magnetic flux density(B) is larger than operating point (BOP), the output will be turned on (Low), the output is held until the magnetic flux density(B) is lower than releasing point (BRP), then turn off (High).

The MT871X family provides a variety of packages to customers: SOT-23/SOT-23 (Thin Outline) for surface mount and flat TO-92 for through-hole mount. All packages are RoHS compliant.

2 Features

- BCD Technology
- Uni-polar Switch
- 2.4~24V Operating Vcc Range
- -40°C~150°C Operating Temperature
- Package Option:
 - Flat TO-92
 - SOT-23
 - SOT-23 (Thin Outline)
- Magnetic Sensitivity Option:
 - MT8711 (BOP=85Gs, BRP=55Gs)
 - MT8712 (BOP=130Gs, BRP=100Gs)
 - MT8713 (BOP=30Gs, BRP=20Gs)
- Open Drain Output
- -27V Reversed Power Supply Protection
- Output Limiting Current Protection
- RoHS Compliant: (EU)2015/863

3 Product Overview of MT871X

Part No.	Description
MT871XA	Flat TO-92, bulk packaging (1000pcs/bag)
MT871XAT	SOT-23, tape & reel (3000pcs/bag)
MT871XET	SOT-23 (thin outline), tape & reel (3000pcs/bag)

4 Applications

- Home appliances
- DC Fan, Electric tools
- Industrial
- Magnetic Encoder

7 Function Description

B_{OP}: Operating Point, Magnetic flux density applied on the branded side of the package which turns the output driver ON ($V_{OUT}=Low$)

B_{RP}: Releasing Point, Magnetic flux density applied on the branded side of the package which turns the output driver OFF ($V_{OUT}=High$)

B_{HYST}: Hysteresis Window, $|B_{OP} - B_{RP}|$

Devices that have a lower magnetic threshold ($V_{OUT}=High$) detect magnets at a farther distance. Higher thresholds ($V_{OUT}=Low$) generally require a closer distance or larger magnet.

8 Feature Description

The MT871X device is sensitive to the magnetic field component that is perpendicular to the top of the package

10 Electrical and Magnetic Characteristics

10.1 Absolute Maximum Ratings

Absolute maximum ratings are limited values to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability is not necessarily implied. Exposure to absolute maximum rating conditions for an extended period of time may affect device reliability.

Symbol	Parameters	Min	Max	Units
VCC	Supply Voltage	-	27	V
V _{RCC}	Reversed Power Supply Protection	-27	-	V
V _{OUT}	Output Voltage	-	27	V
I _{OUT}	Continuous Output Current	-	25	mA
T _A	Operating Ambient Temperature	-40	150	°C
T _S	Storage Temperature	-50	150	°C
T _J	Junction Temperature	-	165	°C
